

The `revtex4-2` document class of the American Physical Society ^{*}

Arthur Ogawa and Mark Doyle [†]

Version 4.2e, dated 2020/10/03

This file embodies the implementation of the APS REVTeX 4.2 document class for electronic submissions to journals.

The distribution point for this work is <https://journals.aps.org/revtex/>, which contains fully unpacked, prebuilt runtime files and documentation.

1 Using REVTeX

The file `README` has retrieval and installation information.

User documentation is presented separately in `auguide.tex`.

The file `template.aps` is a boilerplate file.

.

1.1 Bill of Materials

Following is a list of the files in this distribution arranged according to provenance.

1.1.1 Primary Source

One single file generates all.

```
%revtex4-2.dtx
%
```

1.1.2 Generated by `tex revtex4-2.dtx`

Typesetting this file under TeX itself runs the installer, which generates the package files.

```
%revtex4-2.cls, revtex4.ins, revtex4.drv, aps4-2.rtx,
%aps10pt4-2.rtx, aps11pt4-2.rtx, aps12pt4-2.rtx, revsymp.sty
%
```

1.1.3 Generated by pdf_latex revtex4-2.dtx

Typesetting the source file under L^AT_EX generates the documentation.

```
%revtex4.pdf,  
%
```

1.1.4 Auxiliary

The following are auxiliary files generated in the course of running L^AT_EX:

```
%revtex4.aux revtex4.idx revtex4.ind revtex4.log revtex4.toc  
%
```

2 Code common to all modules

The following may look a bit klutzy, but we want to require only one place in this file where the version number is stated, and we also want to ensure that the version number is embedded into every generated file.

Now we declare that these files can only be used with L^AT_EX 2_ε. An appropriate message is displayed if a different T_EX format is used.

```
1 %<*doc|kernel|aps|rmp|revsymb>  
2 \NeedsTeXFormat{LaTeX2e}[1996/12/01]%  
3 %</doc|kernel|aps|rmp|revsymb>  
4 %<kernel>\ProvidesClass{revtex4-2}  
5 %<aps>\ProvidesFile{aps4-2}  
6 %<rmp>\ProvidesFile{apsrmp4-2}  
7 %<10pt>\ProvidesFile{aps10pt4-2}  
8 %<11pt>\ProvidesFile{aps11pt4-2}  
9 %<12pt>\ProvidesFile{aps12pt4-2}  
10 %<revsymb>\ProvidesPackage{revsymb4-2}  
11 %<*doc>  
12 \ProvidesFile{revtex4-2.dtx}  
13 %</doc>  
14 %<!*package&!options>  
15 %<version>  
16 [2020/10/03 4.2e (https://journals.aps.org/revtex/ for documentation)]% \fileversion  
17 %</*!package&!options>
```

The current class name is remembered in `\class@name`. This is something of a klutzy, relying as it does on knowledge of the implementation of `\ProvidesPackage`.

```
18 %<kernel>\let\class@name\@gtempa
```

3 The driver module driver

This module, consisting of the present section, typesets the programmer's documentation, generating the `README-REVTEX.txt` and sample document as needed.

Because the only uncommented-out lines of code at the beginning of this file constitute the `driver` module itself, we can simply typeset the `.dtx` file directly, and there is thus rarely any need to generate the “driver” DOCSTRIP module. Module delimiters are nonetheless required so that this code does not find its way into the other modules.

The `\end{document}` command concludes the typesetting run.

```
19 %<*doc>
```

The driver uses packages `ltxdoc.sty`, `ltxdocext.sty`, `hyperref.sty`, and whatever font package has been selected.

```
20 \documentclass{ltxdoc}
21 \RequirePackage{ltxdocext}%
22 \let\url\undefined
23 \RequirePackage[colorlinks=true,linkcolor=blue]{hyperref}%
```

We ask for the usual indices and glossaries.

```
24 \CodelineIndex\EnableCrossrefs % makeindex -s gind.ist revtex4
25 \RecordChanges % makeindex -s gglo.ist -o revtex4.gls revtex4.glo
```

3.0.1 Docstrip and info directives

We use so many DOCSTRIP modules that we set the `StandardModuleDepth` counter to 1.

```
26 \setcounter{StandardModuleDepth}{1}
```

The following command retrieves the date and version information from this file.

```
27 \expandafter\GetFileInfo\expandafter{\jobname.dtx}%
```

3.1 The Frontmatter File

As promised above, here is the contents of the frontmatter file.

```
28 \begin{filecontents*}{README-REVTEX.tex}

3.2 The Document Body

Here is the document body, containing only a `\DocInput` directive—referring to this very file. This very cute self-reference is a common `ltxdoc` idiom.

```

205 %\newcommand\revtex{REV\TeX}% TeXSupport
206 \begin{document}%
207 \expandafter\DocInput\expandafter{\jobname.dtx}%
208 \PrintChanges
209 \end{document}

```

And that is the end of the driver for the programmer's documentation.

```

210 %</doc>

```

4 Overview

`REVTeX` is a `LATEX 2ε` document class, somewhat like a hybrid of the standard `LATEX` `book` and `article` classes.

Certain packages are (should be) loaded by this class in any case: `amssymb`, `amsmath`, `bm`, `natbib`.

Certain packages are automatically loaded by this class when a corresponding class option has been invoked:

REVTeX option	package
<code>amsfonts</code>	<code>amsfonts</code>
<code>amssymb</code>	<code>amssymb</code>
<code>aps</code>	<code>overcite</code>

Certain other packages are to be loaded by the document through explicit use of `\usepackage`. Some mentioned in the user documentation are `graphicx`, `longtable`, `hyperref`, and `bm`.

Certain commonly used packages are known to be incompatible with `REVTeX`, among them `multicol` and `cite`. If such a package is found to be loaded, `REVTeX` issues an error message and halts the job. Halting might be considered severe punishment for loading an incompatible package, but if we were to proceed, an even weirder error might be encountered further down the road.

This document class implements the substyle: a set of mutually exclusive class options that, in this case, allow the document class to address multiple societies. It also implements a sub-substyle, giving the journal of the given society. Any society may create a substyle; this file generates one for `aps`.

FIXME: should always load the `graphicx` package. No, allow user to load whichever graphics package is desired.

QUERY: since `amsfonts` and `amssymb` extend syntax, why not load them in any case?

Certain processing occurs at the endgame for reading in REVTeX, thereby establishing precedence for assignments to L^AT_EX's (and REVTeX's) parameters:

1. Figure out which society is operative and read in the indicated `.rtx` file.
2. Figure out which journal option is operative and execute the indicated journal command. This may lead to reading in a journal substyle `.rtx` file.
3. Figure out which pointsize is operative and execute the indicated pointsize command. This may lead to reading in a pointsize `.rtx` file.
4. Execute all of the document's options, in the order declared within the document.
5. Read in all required packages (like `natbib`, `amsfonts`, `amssymb`), that were determined by class, society, and journal.
6. The last required package, if existing, is the document's style file, the `.rty` file. Note that the `.rty` file can override the assignments of REVTeX, society, journal, and required packages, and even load its own packages. It can also, via appendations to `\setup@hook`, override the setup code itself.
7. Execute all of the setup code accumulated. Such code can be queued by REVTeX itself, by the society, by the journal, or by the pointsize.
8. At this point, REVTeX has completed the process of inputting itself, and L^AT_EX will now execute the `\AtEndOfClass` procedures.

REVTeX will have enqueued code to execute at `\AtBeginDocument` time, in two different queues. `\document@inithook` executes immediately upon encountering the `\begindocument` statement, `\class@documenthook` at the end of all the code enqueued via `\AtBeginDocument`.

1. Install procedures to execute at the very end of the class's `\AtBeginDocument` processing, such as
 - (a) closing out the page grid
 - (b) putting out the LastPage label.
 - (c) issuing a `\bibliographystyle` command, based on the value set by the society substyle.
 - (d) setting default values for parameters used in the document. FIXME: differentiate between class's parameters that can wait until they are used in the document, and parameters that are used at `\AtBeginDocument` time.

2. Install procedures to execute the very last at `\AtEndDocument` time, such as the `\clearpage` processing.

Certain events are optionally scheduled for `\AtBeginDocument` time:

1. Setting default values for the Booleans and for other procedures used in formatting.
2. In response to class options options, adjusting parameters and procedures used in formatting.
3. Implementing the `eqsecnum` option, if required.
4. Setting the state engine for data commands.
5. Memorizing procedures for later use.
6. Setting type size and area, for use by later calculations.

Certain events are scheduled for `\class@enddocumenthook` time:

1. Print out the migrated floats or the end notes, if needed.
2. Close out the page grid.
3. Label the last page of the document
4. (`natbib`) prepare to read in the `.aux` file.

5 Writing journal-specific extensions to REVTeX

With this version of REVTeX, we introduce a somewhat different scheme for adapting REVTeX to the needs of a specific journal.

To create a journal substyle, you create new class options in REVTeX for the society, say `osa`, and any of that society's journals, one of which is, say, `josaa`, using the code for the APS as a guide. In particular, each of your new options should separately define `\@society` and `\@journal`. That for the former will be the same for all options relating to a particular society.

Then, for the society, you create a corresponding `.rtx` file, in our case `osa.rtx`. Within that file, you override procedures and parameter assignments as you see fit. Ideally they will be generally applicable to all of that society's journals (see the file `aps.rtx` for a realization of this scheme). Also within that file, you include a section of code for each journal, that for `josaa` looks like:

```
% \@ifx{\@journal\journal@josaa}{%
% code specific to the josaa
% }{}%
%
```

Thus far, the scheme is similar to that used in REVTeX 3.1. However, the new scheme does differ from the old in that the `.rtx` file should define no syntactical extensions to REVTeX.

6 The revtex4 Document Class

Above, we took advantage of 1) the \LaTeX definition of `\ProvidesPackage` and 2) that the line of code immediately afterwards follows the `\ProvidesClass` statement above.

```
211 %<*kernel>
    Print a banner in the log:

220 }%
```

6.1 Compatibility Processing

If the document has `\documentstyle{revtex4}`, then, instead of attempting to run in compatability mode, just complain and exit.

```
221 \if@compatibility
222   \edef\reserved@a{\errhelp{%
223     Change your \string\documentstyle\space statement to
224     \string\documentclass\space and rerun.
225   }}\reserved@a
226   \errmessage{You cannot run \class@name\space in compatability mode}%
227   \expandafter\@@end
228 \fi
```

7 Extensions to the \LaTeX Kernel

```
229 %</kernel>
```

Here, we incorporate the utility, frontmatter, and page grid packages. The `ltxutil`, `ltxfront`, and `ltxgrid` source are distributed with `REVT \LaTeX` .

Here begins the `options` `DOCSTRIP` module.

```
230 %<*options>
```

7.1 Hooks

`\setup@hook` The procedure `\setup@hook` serves as the vehicle for all code that gives values to the class's parameters once all the society, journal, options, and packages have been processed.

Arrange for journal substyles to set their own default values.

```
231 \let\setup@hook\@empty
```

After preamble processing is complete, detect whether package `longtable` has been loaded and patch it.

```
232 \appdef\document@inithook{%
233   \switch@longtable
234   \let\LT@makecaption\LT@makecaption@rtx
235 }%
```

`\LT@makecaption` We override the caption processing method of the `longtable` package: space below the caption is created via strut instead of whitespace.

```
236 \def\LT@makecaption@rtx#1#2#3{%
237   \LT@mcol\LT@cols c{%
238     \hbox to\z@{%
239       \hss
240       \parbox[t]\LTcapwidth{%
241         \sbox\@tempboxa{#1#2: }#3\unskip\nobreak\vrule\@width\z@\@height\z@\@depth .5\baselineskip
242         \ifdim\wd\@tempboxa>\hsize
243           #1#2: }#3\unskip\nobreak\vrule\@width\z@\@height\z@\@depth .5\baselineskip
244         \else
245           \hbox to\hsize{\hfil\box\@tempboxa\hfil}%
246         \fi
247       \endgraf
248     }%
249     \hss
250   }%
251 }%
252 }%
```

`\robust@boldmath` Robustify the `\boldmath` command. If Team L^AT_EX (or any package) ever gets around to fixing this problem, we will bow out. (This fix relates to bug #394.)

```
253 \def\protectdef@boldmath{%
254   \expandafter\ifnotrelax\csname boldmath \endcsname{}\{%
255     \class@info{Robustifying \string\LaTeX's \string\boldmath\space command}%
256     \expandafter\let\csname boldmath \endcsname\boldmath
257     \expandafter\def\expandafter\boldmath\expandafter{\expandafter\protect\csname boldmath \endcsname}
258   }%
259 }%
260 \appdef\document@inithook{%
261   \protectdef@boldmath
262 }%
```

8 Compatability with the geometry package

The `geometry` package of Hideo Umeki provides a way to specify the metrics of the media and page layout. We want to ensure that REV_TE_X does not foreclose on the use of this or any other such package, nor to interfere with explicit assignments of such metric parameters within the document preamble.

The L^AT_EX parameters (resp. T_EX primitives) set by `geometry` are: `\paperwidth`, `\paperheight`, `\textwidth`, `\textheight`, `\topmargin`, `\headheight`, `\headsep`,

`\footskip, \skip\footins, \marginparwidth, \marginparsep, \oddsidemargin, \evensidemargin, \columnsep, \hoffset, \voffset, \mag, \if@twocolumn, \if@twoside, \if@mparswitch, \if@reversemargin,`

REVTeX's assignments can be overridden by any package or other statement in the document preamble, so it should be compatible.

FIXME: one parameter is rendered semantically void (by `ltxgrid.dtx`): `\if@twocolumn`.

9 Options

9.1 Define Booleans Used in Options

The following Booleans are used within the document class to allow the document or the substyle to make selections of formatting. An explicit document class option overrides an assignment made by a substyle.

9.2 Declare Options

9.2.1 Checkin: for Editorial Use

A document class option declaring that the document is being processed by the editorial staff.

This option should:

- put date in footer along with folio
- Have the effect of selecting the `preprint` class option.
- Have the effect of selecting the `showpacs` class option.
- specify that when a float is placed h or H, it will be allowed to break over pages. (Note: be sure that if the enclosed `tabular` has an optional argument, you change it to [v], or remove it entirely.)

```

263 \DeclareOption{checkin}{%
264   \@booleantrue\dateinRH@sw
265   \@booleantrue\preprintsty@sw
266   \def\@pointsize{12}%
267   \@booleantrue\showPACS@sw
268   \@booleantrue\showKEYS@sw
269   \def\fp@proc@h{\allow@breaking@tables}%
270   \def\fp@proc@H{\allow@breaking@tables}%
271 }%
272 \@booleanfalse\dateinRH@sw
273 \def\checkindate{\dateinRH@sw{\tiny(\today)}}{}%
274 \def\allow@breaking@tables{%
275   \def\array@default{v}% tabular can break over pages
276   \@booleanfalse\floats@sw % table can break over pages
277 }%
```

9.2.2 Preprint Style

`\preprintsty@sw` The boolean `\preprintsty@sw` signifies that the document is to be formatted in preprint style.

```

278 \DeclareOption{preprint}{%
279   \@booleantrue\preprintsty@sw
280   \ExecuteOptions{12pt}%
281 }%
282 \DeclareOption{reprint}{%
283   \@booleanfalse\preprintsty@sw
284   \@booleantrue\twocolumn@sw
285   \ExecuteOptions{10pt}%
286 }%
287 \DeclareOption{manuscript}{%
288   \class@warn{Document class option manuscript is obsolete; use preprint instead}%
289   \ExecuteOptions{preprint}%
290 }%
291 \@booleanfalse\preprintsty@sw

```

`\showPACS@sw` If `\showPACS@sw` is true, print the PACS information in the title block, otherwise
`\showKEYS@sw` not. Similarly for `\showKEYS@sw` and the keywords.

9.2.3 Showing PACS and keywords

```

292 \DeclareOption{showpacs}{%
293   \@booleantrue\showPACS@sw
294 }%
295 \DeclareOption{noshowpacs}{%
296   \@booleanfalse\showPACS@sw
297 }%
298 \DeclareOption{showkeys}{%
299   \@booleantrue\showKEYS@sw
300 }%
301 \DeclareOption{noshowkeys}{%
302   \@booleanfalse\showKEYS@sw
303 }%
304 \@booleanfalse\showPACS@sw
305 \@booleanfalse\showKEYS@sw

```

9.2.4 Balance the last page when in two-column page grid

`\balancelastpage@sw` If we are in a two-column page grid, we may wish to balance the columns of the last page. This will be done automatically if the `twocolumn` document class option is chosen. This action will be turned off by the `nobalancelastpage`. A complementary class option, `balancelastpage` is also provided.

```

306 \DeclareOption{balancelastpage}{%
307   \@booleantrue\balancelastpage@sw
308 }%
309 \DeclareOption{nobalancelastpage}{%
310   \@booleanfalse\balancelastpage@sw

```

```

311 }%
312 \@booleantrue\balancelastpage@sw

```

9.2.5 Showing preprint numbers

`\preprint@sw` The boolean `\preprint@sw` signifies that the preprints (cf. `\preprint`) are to be formatted (usually on the title page). The option `preprintnumbers` declares to do so, `nopreprintnumbers` declares not to; the default is to follow `\preprintsty@sw`.

```

313 \DeclareOption{nopreprintnumbers}{\@booleanfalse\preprint@sw}%
314 \DeclareOption{preprintnumbers}{\@booleantrue\preprint@sw}%
315 \appdef\setup@hook{%
316   \@ifxundefined\preprint@sw{\let\preprint@sw\preprintsty@sw}{}%
317 }%

```

9.2.6 Hypertext Option

```

318 \DeclareOption{hyperref}{%

```

The following code had been commented out, it is now truly a comment:

```

% \AtEndOfClass{%
%   \begingroup
%   \edef\@tempa{%
%     \let
%     \noexpand\@clsextension
%     \noexpand\@empty
%     \noexpand\RequirePackage{hyperref}%
%     \def\noexpand
%       \@clsextension{\@clsextension}%
%   }%
%   \expandafter
%   \endgroup
%   \@tempa
% }%
% \def\@pointsize{10}%
%

```

If you have a hyper-foo enabled browser you may prefer this format which does not print the URL for the home page, but just makes the name a link, but by default print it so it works on paper.

```

319 \class@warn{Class option "hyperref" is no longer supported.^^JEmploy \string\usepackage{hyperr
320 }%

```

9.2.7 Type Size

Use `\@pointsize=10` rather than `\@ptsize=0` to allow easy extensions to 9pt or whatever. Note: the three alternatives are mutually exclusive.

At this point, the parameter `\@pointsize` is set to `\undefined`: a society *must* give it a definition.

```

321 \DeclareOption{10pt}{\def\@pointsize{10}}%

```

```

322 \DeclareOption{11pt}{\def\@pointsize{11}}%
323 \DeclareOption{12pt}{\def\@pointsize{12}}%
324 \let\@pointsize\@undefined

```

9.2.8 Media Size

```

\paperheight
\paperwidth 325 \DeclareOption{a4paper}{%
326     \setlength\paperheight {297mm}%
327     \setlength\paperwidth  {210mm}%
328 }%
329 \DeclareOption{a5paper}{%
330     \setlength\paperheight {210mm}%
331     \setlength\paperwidth  {148mm}%
332 }%
333 \DeclareOption{b5paper}{%
334     \setlength\paperheight {250mm}%
335     \setlength\paperwidth  {176mm}%
336 }%
337 \DeclareOption{letterpaper}{%
338     \setlength\paperheight {11in}%
339     \setlength\paperwidth  {8.5in}%
340 }%
341 \DeclareOption{legalpaper}{%
342     \setlength\paperheight {14in}%
343     \setlength\paperwidth  {8.5in}%
344 }%
345 \DeclareOption{executivepaper}{%
346     \setlength\paperheight {10.5in}%
347     \setlength\paperwidth  {7.25in}%
348 }%
349 \DeclareOption{landscape}{%
350     \setlength\@tempdima  {\paperheight}%
351     \setlength\paperheight {\paperwidth}%
352     \setlength\paperwidth  {\@tempdima}%
353 }%

```

Effectively select letterpaper.

```

354 \ds@letterpaper

```

9.2.9 Bibnotes

`\frontmatter@footnote@produce` Frontmatter footnotes result from frontmatter commands like `\email`, `\homepage`, `\altaffiliation`, and `\thanks`. The default for `\frontmatter@footnote@produce` is `\frontmatter@footnote@produce@footnote`, which formats the frontmatter footnotes at the foot of the title page. The `bibnotes` class option defers them to the bibliography.

```

355 \DeclareOption{bibnotes}{\let\frontmatter@footnote@produce\frontmatter@footnote@produce@endnote
356 \DeclareOption{nobibnotes}{\let\frontmatter@footnote@produce\frontmatter@footnote@produce@footn

```

```

357 \let\frontmatter@footnote@produce\frontmatter@footnote@produce@footnote
358 \appdef\class@enddocumenthook{\auto@bib}%

```

9.2.10 Footinbib

`\footinbib@sw` The boolean `\footinbib@sw` signifies that text footnotes are to be set in the bibliography, as endnotes.

The document may set the value one way or the other via the following two class options.

```

359 \DeclareOption{footinbib}{\@booleantrue\footinbib@sw}
360 \DeclareOption{nofootinbib}{\@booleanfalse\footinbib@sw}

```

The default value is `\false@sw`, and the society or journal may override the default.

```

361 \@booleanfalse\footinbib@sw

```

9.2.11 altaffilletter

`\altaffilletter@sw` Determine the procedure `\thefootnote` used in frontmatter: the footnote symbol used in titlepage footnotes.

```

362 \DeclareOption{altaffilletter}{\@booleantrue\altaffilletter@sw}%
363 \DeclareOption{altaffilsymbol}{\@booleanfalse\altaffilletter@sw}%
364 \@booleanfalse\altaffilletter@sw

```

9.2.12 superbib

`\place@bibnumber` The procedure `\place@bibnumber` produces the number at the head of the `\bibitem`, in the bibliography. By default, it has the `\bibnumfmt` meaning assigned by the `natbib` package. It may be overridden by society, journal, or by the document options.

```

365 \DeclareOption{superbib}{%
366 \let\place@bibnumber\place@bibnumber@sup
367 }%
368 \def\place@bibnumber{\NATx@bibnumfmt}%

```

`\place@bibnumber@sup` For producing the `\bibitem` device, we define two procedures to select from.
`\place@bibnumber@inl` Note that we could have used `natbib`'s `\ifNAT@super` switch, but it does not allow for altering the meaning of `\bibnumfmt`.

```

369 \def\place@bibnumber@sup#1{\textsuperscript{#1}}%
370 \def\place@bibnumber@inl#1{[#1]}%

```

9.2.13 citeautoscript

`\citeautoscript@sw` This class option allows you to automatically accomodate a change from non-superscripted, numbered references to superscripted, numbered references.

Note: you should always mark up your document with the assumption that references are *not* going to be superscripted. Otherwise this option has no hope of working properly.

```

371 \DeclareOption{citeautoscript}{\@booleantrue\citeautoscript@sw}%
372 \@booleanfalse\citeautoscript@sw

```

9.2.14 Variants on the Bibliography Style

REVTeX anticipates that a society or journal will provide two related BibTeX bibliography style variants, designating one as the default. A pair of document class options `longbibliography` and `nolongbibliography` allows the user to explicitly select between them.

```

\longbibliography@sw REVTeX's default for \longbibliography@sw is \true@sw.
376 \DeclareOption{longbibliography}{\@booleantrue\longbibliography@sw}%
374 \DeclareOption{nolongbibliography}{\@booleanfalse\longbibliography@sw}%
375 \@booleantrue\longbibliography@sw

\epprint@enable@sw The document class options epprint and noepprint give the user the ability to turn
off production of the epprint field in the bibliography.
376 \DeclareOption{epprint}{\@booleantrue\epprint@enable@sw}%
377 \DeclareOption{noepprint}{\@booleanfalse\epprint@enable@sw}%
378 \@booleantrue\epprint@enable@sw

```

9.2.15 Simplex/Duplex Pages

```

\twoside@sw The flag \twoside@sw signifies that the document is to be formatted for duplex
printing. After the preamble is processed, we align the value of the kernel \newif
switch \if@twoside to that of \twoside@sw. \if@twoside itself is used in the
kernel's \cleardoublepage and \@outputpage procedures.
379 \@booleanfalse\twoside@sw
380 \appdef\document@inithook{%
381 \twoside@sw{\@twosidetrue}{\@twosidefalse}%
382 }%

```

The complementary options `twoside` and `oneside` assert formatting for duplex or simplex printing, respectively. At the same time, we arrange for the selection of the page grid with respect to the marginal column: Because `\if@reversemargin` remains default (false), if duplex printing, this column will always be on the (right), if simplex printing, it will always be on the (outside). QUERY: correct choice? FIXME: assign `\if@mparswitch` later (and protect the assignment, too).

```

383 \DeclareOption{twoside}{\@booleantrue \twoside@sw\@mparswitchfalse}%
384 \DeclareOption{oneside}{\@booleanfalse\twoside@sw\@mparswitchtrue}%

```

9.2.16 Two-Column Page Grid

```

\twocolumn@sw The flag \twocolumn@sw signifies that the document is to be formatted in the
two-column page grid.

```

If no options relating to page grid are invoked by `\AtBeginDcoument` time, we set default values. Up to that point, the class can check if `\twocolumn@sw` is `\undefined` to see if any related options have been invoked.

`onecolumn` specifies one-column page grid. The `twocolumn` class option employs the standard mechanism for changing the column grid: the `ltxgrid` package.

```
385 \DeclareOption{onecolumn}{\@booleanfalse\twocolumn@sw}%
386 \DeclareOption{twocolumn}{\@booleantrue\twocolumn@sw}%
387 \@booleanfalse\twocolumn@sw
```

The column grid is determined by the state of the switch `\twocolumn@sw` and is effected at `\class@documenthook` time. The society or journal file may re-define `\select@column@grid` to accomodate, e.g., more than two choices for the page grid.

Note that `\open@column@two` adds items to the Main Vertical List, so constitutes the true beginning of the document.

Note also that if the selected column grid is a one-column grid, there is nothing to do, because `ltxgrid` has already set that up via `\@begindocumenthook`.

```
388 \def\select@column@grid{%
389   \twocolumn@sw{%
390     \twocolumn@grid@setup
391     \open@twocolumn
392   }{%
393     \onecolumn@grid@setup

% \open@onecolumn
%

394 }%
395 }%
396 \appdef\class@documenthook{%
397   \select@column@grid
398 }%
```

`\clear@document` We install into `\class@enddocumenthook` a trap for the procedure `\clearpage` that attempts to end the current page. This procedure needs to be headpatched with `\close@column` to end the current page grid.

This procedure is executed after all typesetting is complete i.e., after items like `\printtables`, as well as all commands queued up by `\AtEndDocument`.

```
399 \appdef\setup@hook{%
400   \let\clearpage@ltx\clearpage
401   \prepdef\clear@document{\let\clearpage\clearpage@ltx\let\clear@document\@empty\close@column}%
402   \appdef\class@documenthook{%
403     \appdef\class@enddocumenthook{%
404       \let\clearpage\clear@document
405     }%
406   }%
407 }%
```

`\authoryear@sw` The boolean `\authoryear@sw` signifies that we are to use author-year citations rather than numerical citations.

The `author-year` class option selects “author-year” citations; `numerical` selects “numerical” citations. The former is the default.

```

408 \DeclareOption{author-year}{\@booleantrue\authoryear@sw}%
409 \DeclareOption{numerical}{\@booleanfalse\authoryear@sw}%
410 \@booleanfalse\authoryear@sw

```

`\galley@sw` The boolean `\galley@sw` signifies that the document is to be formatted in galley style.

Asserting both `\galley@sw` and `\preprintsty@sw` may produce strange formatting results, but it is not illegal. However, it *is* illegal to assert galley and any `twocolumn` option.

`galley` emulates setting the galleys of a two-column journal. CHANGED: this option should effectively set `\preprintsty@sw` false. NOTE: it makes no sense to assert both galley and `twocolumn`.

```

411 \DeclareOption{galley}{%
412   \ExecuteOptions{onecolumn}%
413   \@booleantrue\galley@sw
414   \@booleanfalse\preprintsty@sw
415   \appdef\setup@hook{%
416     \advance\textwidth-\columnsep
417     \textwidth.5\textwidth
418   }%
419 }%
420 \@booleanfalse\galley@sw

```

9.2.17 raggedbottom or flushbottom

`\raggedcolumn@sw` The class options `raggedbottom` and `flushbottom` determine whether the columns (page) are ragged bottom or flush bottom. Note that we do not select a default here; that is done by the journal substyle.

```

421 \DeclareOption{raggedbottom}{\@booleantrue\raggedcolumn@sw}
422 \DeclareOption{flushbottom}{\@booleanfalse\raggedcolumn@sw}
423 \@booleanfalse\raggedcolumn@sw
424 \appdef\setup@hook{%
425   \raggedcolumn@sw{\raggedbottom}{\flushbottom}%
426 }%

```

9.2.18 tightenlines

This class option specifies that standard leading is to be used to set the type. If lacking, the leading will be loose.

`\tightenlines@sw` The boolean `\tightenlines@sw` signifies that the leading is to be made standard amount. If false, it means that the leading is to be set extra open. Has no effect on 10pt size option.

```

427 \DeclareOption{tightenlines}{\@booleantrue\tightenlines@sw}
428 \@booleanfalse\tightenlines@sw

```

9.2.19 lengthcheck

`\lengthcheck@sw` The flag `\lengthcheck@sw` signifies that the length checking is in effect. It is up to the individual journal substyle to alter its formatting accordingly.

429 `\@booleanfalse\lengthcheck@sw`

This class option specifies that the formatted document should approach as closely as possible the formatting of an actual journal article to facilitate the author's performance of a length check.

FIXME: society or journal may have its own definition of this option.

```
430 \DeclareOption{lengthcheck}{%
431   \@booleantrue\lengthcheck@sw
432   \ExecuteOptions{reprint}%
433 }
```

In addition, if length checking is in effect, we will enable the tally of text length.

```
434 \appdef\setup@hook{%
435   \lengthcheck@sw{\@booleantrue\tally@box@size@sw}{}%
436 }
```

9.2.20 Draft and Final

`\draft@sw` The flag `\draft@sw` signifies that the document is to be formatted in draft mode.

```
437 \appdef\setup@hook{%
438   \draft@sw{\overfullrule 5\p@}{\overfullrule\z@}%
439 }
```

Certain packages may pay attention to the class option `draft` that sets this Boolean.

```
440 \DeclareOption{draft}{\@booleantrue\draft@sw}%
441 \DeclareOption{final}{\@booleanfalse\draft@sw}%
442 \@booleanfalse\draft@sw
```

9.2.21 eqsecnum

`\eqsecnum@sw` The flag `\eqsecnum@sw` signifies that equations are to be numbered with the section, e.g., "Eq. (2.13)".

```
443 \appdef\setup@hook{%
444   \eqsecnum@sw{%
445     \@addtoreset{equation}{section}%
446     \def\theequation@prefix{\arabic{section}.}%
447   }{%
448 }
```

The `eqsecnum` class option signifies that equations are to be numbered within sections.

```
449 \DeclareOption{eqsecnum}{\@booleantrue\eqsecnum@sw}%
450 \@booleanfalse\eqsecnum@sw
```

9.2.22 secnumarabic

The `secnumarabic` class option signifies that sectioning commands are to be numbered arabic: the procedure `\secnums@arabic` is executed as the default. Otherwise, the procedure `\secnums@rtx` determines things. The society or journal may redefine either procedure, and may change the definition of `\setup@secnums` itself, thereby establishing a different default.

```
451 \appdef\setup@hook{%
452 \setup@secnums
453 }%
454 \DeclareOption{secnumarabic}{%
455 \def\setup@secnums{\secnums@arabic}%
456 }%
457 \def\setup@secnums{\secnums@rtx}%
```

The code that defines `\secnums@rtx` and `\secnums@arabic` appears in Section 14.4.

`fleqn` FIXME: model `fleqn` after `amsfonts`. I no longer understand why I said this. `fleqn.clo` is not a package, so it can simply be `\input`.

```
458 \DeclareOption{fleqn}{%
459 \input{fleqn.clo}%
460 }%
```

9.2.23 floats/endfloats

`\floats@sw` The Boolean `\floats@sw` signifies that floats are to be floated; if false, that floats
`\floatp@sw` are to be deferred to the end of the document. By default, the former. Note that the state of this Boolean is to be changed by the document class in response to user-selected options.

This boolean and the assignment of its default value is done by the `ltxutil` package.

The Boolean `\floatp@sw` signifies that endfloats are to be set one per page; if false, that endfloats are to be set with multiple floats per page permitted. By default, the latter. Note that the state of this Boolean is to be changed by the document class in response to user-selected options. The default is established here.

These options control, via the Boolean `\floats@sw`, whether floats are to be migrated to the end of the document.

```
461 \DeclareOption{floats}{\@booleantrue\floats@sw\@booleanfalse\floatp@sw}
462 \DeclareOption{endfloats}{\@booleanfalse\floats@sw\@booleanfalse\floatp@sw}
463 \DeclareOption{endfloats*}{\@booleanfalse\floats@sw\@booleantrue\floatp@sw}
464 \@booleantrue\floats@sw
465 \@booleantrue\floatp@sw
```

9.2.24 titlepage/notitlepage

These options control, via `\titlepage@sw`, whether the title block is to be set on a separate page.

`\titlepage@sw` The flag `\titlepage@sw` signifies that a forced page break is to follow the title page: the article title appears on a page by itself.

```
466 \DeclareOption{titlepage}{\@booleantrue\titlepage@sw}
467 \DeclareOption{notitlepage}{\@booleanfalse\titlepage@sw}
468 \@booleanfalse\titlepage@sw
```

9.2.25 Substyle and Sub-substyle

`\change@society` If the society or, resp., journal has already been assigned, notify user whether it is being overridden.

```
469 \def\change@society#1{%
470   \def\@tempa{#1}%
471   \@ifxundefined\@society{%
472     \class@info{Selecting society \@tempa}%
473     \let\@society\@tempa
474   }{%
475     \ifx{\@tempa\@society}{}%
476       \class@warn{Conflicting society \@tempa<>\@society; not selected}%
477     }%
478   }%
479 }%
480 \def\change@journal#1{%
481   \def\@tempa{#1}%
482   \@ifxundefined\@journal{%
483     \class@info{Selecting journal \@tempa}%
484     \let\@journal\@tempa
485   }{%
486     \ifx{\@tempa\@journal}{}%
487       \class@warn{Conflicting journal \@tempa<>\@journal; not selected}%
488     }%
489   }%
490 }%
```

Here had been the class options relating to the APS. Now that all societies are on an equal footing, this code is in the respective `.rtx` file.

9.2.26 Optical Society of America

Here are the class options relating to the Optical Society of America.

Note: as of 2008, the only OSA module being distributed by ctan is `osajnl.rtx`. The class options declared here are, I think, unused.

```
491 \DeclareOption{osa}{\change@society{osa}\let\@journal\@undefined}%
492 \DeclareOption{osameet}{\change@society{osa}\def\@journal{osameet}}%
493 \DeclareOption{opex}{\change@society{osa}\def\@journal{opex}}%
494 \DeclareOption{tops}{\change@society{osa}\def\@journal{tops}}%
495 \DeclareOption{josa}{\change@society{osa}\def\@journal{josa}}%
```

`\rtx@require@packages` The procedure `\rtx@require@packages` accumulates all `\RequirePackage` statements in the course of loading the document class. Carrying out these operations at that time is needed: `\ProcessOptions` must be executed first.

```
496 \let\rtx@require@packages\@empty
```

`\MakeUppercase` We load the `textcase` package of David Carlisle. Now that its bug of long standing
`\MakeLowercase` has been repaired, we no longer need to doctor it up. And, because its loading has been deferred until `\rtx@require@packages` time, we no longer override `LATEX` here. Instead, the `textcase` package will be asked to do that.

```
497 \appdef\rtx@require@packages{%
498   \RequirePackage[overload]{textcase}%
499 }%
```

The following code used to let the `textcase` commands override those of `LATEX`:

```
%\appdef\setup@hook{%
% \expandafter
% \let\csname MakeUppercase \expandafter\endcsname
%   \csname MakeTextUppercase \endcsname
% \expandafter
% \let\csname MakeLowercase \expandafter\endcsname
%   \csname MakeTextLowercase \endcsname
% }%
%
```

`amsfonts` The class option `amsfonts` has the same effect as if the document preamble contained a `\usepackage{amsfonts}` statement.

```
500 \DeclareOption{amsfonts}{%
501   \def\class@amsfonts{\RequirePackage{amsfonts}}%
502 }%
503 \DeclareOption{noamsfonts}{%
504   \let\class@amsfonts\@empty
505 }%
506 \appdef\rtx@require@packages{%
507   \@ifundefined\class@amsfonts{}\{\class@amsfonts}%
508 }%
```

`amssymb` The class option `amssymb` has the same effect as if the document preamble contained a `\usepackage{amssymb}` statement.

```
509 \DeclareOption{amssymb}{%
510   \def\class@amssymb{\RequirePackage{amssymb}}%
511 }%
512 \DeclareOption{noamssymb}{%
513   \let\class@amssymb\@empty
514 }%
515 \appdef\rtx@require@packages{%
516   \@ifundefined\class@amssymb{}\{\class@amssymb}%
517 }%
```

`amsmath` The class option `amsmath` has the same effect as if the document preamble contained a `\usepackage{amsmath}` statement.

We require version 1.2 (dated 1997/03/20) or later. The `\ver@amsmath.sty`, will

\LaTeX note: Certain \LaTeX procedures have an arbitrary and pointless restriction that they may be used only within the preamble. We get around this by preserving the procedures in private `\csnames`.

FIXME note: it is difficult to ensure that an error summary will be printed on the console at the very end, but `ltxgrid` allows accomplishing this via an interrupt, put down at `\AtEndDocument` time.

```

518 \DeclareOption{amsmath}{%
519   \def\class@amsmath{\RequirePackage{amsmath}[\ver@amsmath@prefer]}%
520 }%
521 \DeclareOption{noamsmath}{%
522   \let\class@amsmath\empty
523 }%

562 \def\ver@amsmath@prefer{2000/01/15 v2.05 AMS math features}%

```

9.2.27 Presenting Authors and Their Affiliations

Class options for presenting authors and their affiliations are now defined in `ltxfront.dtx`.

9.2.28 Typeset by REVTeX

`\byrevtex@sw` The flag `\byrevtex@sw` signifies that the document should bear an imprint to the effect that it was formatted by this document class.

The class option `byrevtex` signifies that you want the “Typeset by REVTeX” byline to appear on your formatted output. By default, no such byline appears.

```

565 \DeclareOption{byrevtex}{\@booleantrue\byrevtex@sw}%
566 \@booleanfalse\byrevtex@sw

```

9.3 Attempt to fix float placement failure

`\force@deferlist@sw` REVTeX uses the `ltxgrid` package, which provides the ability to attempt repairs when L^AT_EX’s float placement mechanism is about to fail, but that facility is turned off by default. Users should invoke the `floatfix` document class option to enable this L^AT_EX extension. If not, a helpful message is printed in the log, indicating how to work around the difficulty.

```

568 \DeclareOption{floatfix}{\@booleantrue\force@deferlist@sw}%
569 \DeclareOption{nofloatfix}{\@booleanfalse\force@deferlist@sw}%
570 \@booleanfalse\force@deferlist@sw

```

`\@fltovf` The L^AT_EX kernel error message `\@fltovf` may now be a bit more helpful to the user; likewise for the `\@fltstk` message of `ltxgrid`.

```

568 \gdef\@fltovf{%
569   \@latex@error{%
570     Too many unprocessed floats%
571     \force@deferlist@sw}{; try class option [floatfix]}}%
572   \@ehb
573 }%
574 \def\@fltstk{%
575   \@latex@warning{%
576     A float is stuck (cannot be placed)%
577     \force@deferlist@sw}{; try class option [floatfix]}}%
578   }%
579 }%

```

`\ltxgrid@info@sw` The two options `ltxgridinfo` and `outputdebug` turn on informative diagnostics within the package `ltxgrid`. Only people who really want to see this output will select these class options. Consult documentation for the `ltxgrid` package to see what output the related switches enable.

```
580 \DeclareOption{ltxgridinfo}{%
581   \@booleantrue\ltxgrid@info@sw
582 }%
583 }%
584 \DeclareOption{outputdebug}{%
585   \@booleantrue\outputdebug@sw
586   \@booleantrue\ltxgrid@info@sw
587   \@booleantrue\ltxgrid@foot@info@sw
588   \traceoutput
589 }%
```

9.4 Option to relax page height

`\textheight@sw` The `ltxgrid` package can set text pages to their natural height or force them to the full text height; the latter is the default. If setting the pages with a variable length, the running foot will move up or down with the natural length of the text column. While I recommend against doing so, this option will turn that switch to the latter setting.

```
590 \DeclareOption{raggedfooter}{\@booleanfalse\textheight@sw}%
591 \DeclareOption{noraggedfooter}{\@booleantrue\textheight@sw}%
```

9.5 Selecting procedure for processing abstract

Code defining options `newabstract` and `oldabstract` has been removed.

9.6 Option to turn on diagnostics in the frontmatter

`\frontmatterverbose@sw` A diagnostic option, not for the average enduser, which reveals the workings of the frontmatter. This code interfaces to that of `ltxfront.dtx`.

```
592 \DeclareOption{frontmatterverbose}{\@booleantrue\frontmatterverbose@sw}%
593 \@booleanfalse\frontmatterverbose@sw
```

`\linenumbers@sw` An option to number the lines of type in the output in the manner of `lineno`. At present, we use that very package to implement this functionality. This means that users may modify the workings of that package per its documentation (which see).

However, compatibility with `amsmath` requires that `lineno` be loaded afterwards. Therefore, we defer loading of this package until after the preamble is completed.

```
594 \DeclareOption{linenumbers}{%
595   \appdef
596   \class@documenthook{%
597     \RequirePackage{lineno}[2005/11/02 v4.41]%
```

```

598 \linenumbersep4pt\relax
599 \linenumbers\relax
600 }%
601 }%

```

By default, line numbering is off.

`\NAT@merge` Add class option `nomerger`, to turn off natbib 8.3 syntax for citation key. The default value of REVTeX 4.1 for `\NAT@merge` is `\thr@@`, which turns on the new syntax along with its semantics. Legacy documents that would be incompatible with the new syntax can be successfully processed with class option `nomerger`.

```

602 \DeclareOption{nomerger}{%
603 \appdef\setup@hook{%
604 \ifnum{\NAT@merge>\z@}\let\NAT@merge\z@}\}%
605 }%
606 }%

```

9.7 Default Option, Society, Journal, and pointsize

This change will not break OSA documents because that society is still built in to revtex4.

`\@parse@class@options@society` The procedure `\@parse@class@options@society` parses the options passed to this document class for the `\@society`. It is like `\ProcessOptions*` in that it accesses `\@optionlist{\@currname.\@current}`. Any undefined option is considered: if there is a corresponding .rtx file, it will change the society accordingly and define a placeholder class option for the society thus found (thus preventing a spurious "option not found" message).

The procedure `\@parse@class@options@` parses the document's options for any that set the `\csname` provided.

```

607 \def\@parse@class@options@society{%
608 \edef\@tempa{\@optionlist{\@currname.\@current}}}%
609 \expandafter\@for\expandafter\CurrentOption\expandafter:\expandafter=\@tempa\do{%

```

The class option `hypertext` enables the built-in hypertext capabilities, which coincide with those of `custom-bib`-generated BibTeX styles using the guard code `hypertext`.

Note that APS has these capabilities turned off by default; Loading the `hyperref` package turns them on.

```

664 \DeclareOption{hypertext}{\hypertext@enable@ltx}%
665 \appdef\document@inithook{\@ifpackageloaded{hyperref}{\hypertext@enable@ltx}{}}%

```

The default handling for a document class option depends upon whether the `\@society` is defined.

If not, then hunt for a `.rtx` file with that name. If it exists, then we will take this option as the name of the society, otherwise, declare the option as not used.

(This behavior is similar to the L^AT_EX2.09 handling, where one looked for a `.sty` file, except that in this case, we must provide for journal substyles that may be defined in the society file, or have their own journal substyle file.)

At the point where the class file is finished loading, we then read in the society file. That file can define further class options, such as the journal substyle.

For users, this will mean that they can specify the society and journal simply by specifying first the former and then the latter among their document class options. The society *must* have a corresponding `.rtx`.

```
666 %</options>
```

```
667 %<*package>
```

```
\@process@society
```

```
\@process@journal 668 \def\substyle@post{4-2}%
```

```
\@process@pointsize 669 \def\substyle@ext{rtx}%
```

```
670 \DeclareOption*{\OptionNotUsed}%
```

A society substyle may define its own options, via `\DeclareOption`.

At the end of this document class, we process the society file, using `aps.rtx` if none has been specified in the document.

```
671 \def\@process@society#1{%
```

```
672 \@ifxundefined\@society{%
```

```
673 \class@warn{No Society specified, using default society #1}%
```

```
674 \def\@society{#1}\let\@journal\@undefined

```

```
687 }%
```

```
688 \def\rtx@do@substyle#1{%
```

```
689 \InputIfFileExists{#1\substyle@post.\substyle@ext}{\csname rtx@#1\endcsname}%
```

```
690 }%
```

Document class options 10pt, 11pt, and 12pt are implemented by REV_TE_X itself and determine `\@pointsize`. These provide formatting settings appropriate to the society's journals.

If not specified by the document, a value `\@pointsize@default` is used. This default can be set by the journal. Here, the society sets its default.

```

691 \def\@process@pointsize#1{%
692   \ifxundefined\@pointsize{%
693     \def\@pointsize{#1}%
694     \class@warn{No type size specified, using default \@pointsize}%
695   }{}%
696   \expandafter\expandafter
697   \expandafter\rtx@do@substyle
698   \expandafter\expandafter
699   \expandafter{\expandafter\@society\@pointsize pt}%
700 }%

```

9.8 Class-Asserted Options

Here we establish the default document class options. Those of the document itself will override these.

10 Procedures Dependent Upon Options

Here we introduce `classes.dtx` definitions for the page styles that people will expect to be able to use.

```

```

13 Society- and Journal-Specific Code

`\@journal` Journal test helper, used as

```
%\@ifx{\@journal\journal@pra}{%
%  <journal-specific setup>
%\fi
%
```

Journal code might like to further specify (if as yet undefined) or distinguish on the following Booleans.

Note: the journal substyle code should only alter the value of one of these Booleans if the Boolean is `\undefined`. This convention is what makes the document's options take precedence over the values set by the journal.

FIXME: make this table an exhaustive listing of all the parameters set by the class options.

<code>\@pointsize</code>	(101112), depending on the type size
<code>\footinbib@sw</code>	true if footnotes are to be formatted in the bibliography
<code>\preprintsty@sw</code>	true for preprint and hyperpreprint
<code>\eqsecnum@sw</code>	true means that equations are numbered within sections
<code>\groupauthors@sw</code>	true means authors listed separately for each address
<code>\preprint@sw</code>	true means to produce the preprint numbers as part of the title block
<code>\showPACS@sw</code>	true means to produce the PACS as part of the title block
<code>\showKEYS@sw</code>	true means to produce the keywords as part of the title block
<code>\@affils@sw</code>	true means each affiliation is printed, for each author
<code>\runinaddress@sw</code>	true means author addresses are printed run-in
<code>\draft@sw</code>	true implies that PACS will be printed
<code>\tightenlines@sw</code>	true if preprint single spaced
<code>\lengthcheck@sw</code>	true if length checking is in effect
<code>\byrevtex@sw</code>	true means to announce “typeset by REVTeX”
<code>\titlepage@sw</code>	true for title is to be set on a separate page
<code>\twocolumn@sw</code>	true if two-column page grid
<code>\twocolumn@sw</code>	true if we are to automatically balance the columns of the last page
<code>\twoside@sw</code>	true means to format pages for duplex printing
<code>\floats@sw</code>	false means floats are migrated to end of document
<code>\floatp@sw</code>	true means endfloats are set one to a page
<code>\class@amsfonts</code>	if <code>\@empty</code> , means that <code>amsfonts</code> will <i>not</i> be loaded
<code>\class@amssymb</code>	if <code>\@empty</code> , means that <code>amssymb</code> will <i>not</i> be loaded
<code>\frontmatter@footnote</code>	if <code>\undefined</code> , means that the default (<code>\footnote</code>) will be used
<code>\place@bibnumber</code>	if <code>\undefined</code> , means that the default (inline) will be used

Note: if `\twocolumn@sw` and `\preprintsty@sw` are both false, then ‘galley’ style is in effect. The `galley` option invokes `onecolumn`, but does not affect the `\preprintsty@sw`.

Note: `\paperwidth` and `\paperheight` are not integrated into this scheme, and should be selected by the document alone.

14 Body

14.1 counters

The following definitions are probably identical to those in `classes.dtx`

```
793 \def\labelenumi{\theenumi.}
794 \def\theenumi{\arabic{enumi}}
795 \def\labelenumii{(\theenumii)}

14.4 Sectioning Commands

14.4.1 Sectioning Commands and Their Productions

The following counters are defined by LaTeX's standard document classes. We do likewise, then assign flag values to the productions, awaiting overrides.

```

852 \newcounter{part}%
853 \let\thepart\@undefined
854 \newcounter{section}%
855 \let\thesection\@undefined
856 \newcounter{subsection}[section]%
857 \let\thesubsection\@undefined
858 \newcounter{subsubsection}[subsection]%
859 \let\thesubsubsection\@undefined
860 \newcounter{paragraph}[subsubsection]%
861 \let\theparagraph\@undefined
862 \newcounter{subparagraph}[paragraph]%
863 \let\thesubparagraph\@undefined

```

The procedure invoked by `\setup@secnums` provides meanings for these productions.

`\secnums@rtx` These two procedures define the meanings of each of the productions of the counters of the sectioning commands, but only if nothing else has defined it.

`\secnums@arabic`

```

16.1 Citations, Bibliography, Endnotes

16.1.1 Bibliography

Load Patrick Daly's `natbib` package, <http://ctan.tug.org/macros/latex/contrib/supported/natbib>

Note that `natbib` assumes that it loads over a document class, such as the `article` class, that has already defined `\thebibliography` and `\@listi`.

Note also that `natbib` also installs a command `\NAT@set@cites` into `\AtBeginDocument` which presumes that the proper `\bibpunct` command has been issued.

Note that the macro `\NAT@sort` controls whether citations are left alone (`\NAT@sort=0`), sorted (`\NAT@sort=1`), or sorted and compressed (`\NAT@sort=2`).

Since we give `natbib` the `sort&compress` option, if you prefer `sort`, you need only `\let\NAT@sort to be \@ne`. However, if you prefer the effect of having neither `sort` nor `sort&compress`, you must `\let\NAT@sort to be \@z` and you must also define `\let\NAT@cmprs to be \@z`.

As of version 8.2, `natbib` now no longer binds at the point where it is read in. This means that we can freely change `\NAT@sort`, `\NAT@cmprs`, and the new `\NAT@merge`. Henceforth, we require that this later version be used.

For other `natbib` customizations, you may proceed as if you were going to use the `natbib.cfg` file: anything that you can modify by this means is fair game. Once REVTeX is finished loading, you can assert any definitions for `natbib` that you wish.

`\rev@cit` We define variants on `natbib`'s commands `\cit`, `\citealp`, and `\citealpnum`.
`\rev@citealp` `\rev@citealpnum` uses a numerical citation. `\rev@citealp` and `\rev@citealpnum`
`\rev@citealpnum` are the aliases of `\onlinecite`, `\rev@cit` that of `\textcite`.

In each case, we invoke `\rtx@swap@citea` to effect different productions between multiple arguments to the `\cite` command.

`\rev@citealpnum` provides textual citations where superscript citations are the default. These should be accessible via the `\cit` command.

Therefore we remember how to do a numerical citation even when the superscript citation has been selected.

```

1282 \expandafter\DeclareRobustCommand
1283 \expandafter\rev@cit
1284 \expandafter{%
1285   \expandafter\begin{group}
1286     \expandafter\rtx@swap@citea
1287     \expandafter\g@bbblefirsttoken
1288       \csname citet \endcsname
1289 }%
1290 \expandafter\DeclareRobustCommand
1291 \expandafter\rev@citealp
1292 \expandafter{%
1293   \expandafter\begin{group}
1294     \expandafter\rtx@swap@citea
1295     \expandafter\g@bbblefirsttoken
1296       \csname citealp \endcsname
1297 }%
1298 \expandafter\DeclareRobustCommand
1299 \expandafter\rev@citealpnum
1300 \expandafter{%
1301   \expandafter\begin{group}
1302     \expandafter\rtx@swap@citenum
1303     \expandafter\g@bbblefirsttoken
1304       \csname citealp \endcsname
1305 }%
1306 \def\rtx@swap@citenum{%
1307   \rtx@swap@citea
1308   \let\@cite\NAT@citenum

```

```

1309 \let\NAT@mbox\mbox
1310 \let\citeyear\NAT@citeyear
1311 \let\NAT@space\NAT@spacechar
1312 }%
1313 \def\g@bbblefirsttoken{%
1314 \expandafter\true@sw
1315 \expandafter\@empty
1316 }%

```

`\rtx@citesuper` We prepare to redefine `natbib`'s procedure `\NAT@citesuper`, which is executed when setting a superscript citation. The `\hspace` is removed: in any case, it should really be `\hspace*`, to prevent an unwanted pagebreak.

```

1317 \newcommand\rtx@citesuper[3]{%
1318 \ifNAT@swa
1319 \leavevmode
1320 \unskip
1321 % \hspace{1\p}%
1322 \textsuperscript{\normalfont#1}%
1323 \if*#3*\else\ (#3)\fi
1324 \else
1325 #1%
1326 \fi
1327 \endgroup
1328 }%

```

`\@makefnmark@cite` We define a procedure that will set a footnote mark the same way that a citation is set. If footnotes are put in the bibliography with `\footinbib@sw`, then the corresponding mark should look the same as the result of a `\cite`. This is how we do it.

```

1329 \def\@makefnmark@cite{\begingroup\NAT@swatrue\@cite{{\@thefnmark}}{}{}}%

```

`\rtx@bibsection` Prepare to override `natbib`'s definition of `\bibsection`.

```

1330 \def\rtx@bibsection{%
1331 \@ifx@empty\refname{%
1332 \par
1333 }{%
1334 % \let\@hangfroms@section\@hang@froms
1335 \expandafter\section\expandafter*\expandafter{\refname}%
1336 \@nbreaktrue
1337 }%
1338 }%

```

`\rtx@swap@citea` The procedures `\rtx@def@citea`, `\rtx@def@citea@close`, and `\rtx@def@citea@box` can take over the management of `natbib`'s `\@citea` macro to effect more sophisticated behavior of the punctuation between textual citations. The switch is performed by `\rtx@swap@citea`.

In these procedures, we use `\count@` to count the number of arguments of the `\cite` command, and we use `\c@NAT@ctr` to keep track of which argument we are processing. The latter counter is created by `natbib` and used there solely in

bibliography processing, where it keeps track of the reference number. We take over its use in these macros, but only locally; therefore these procedures should work properly, even within the bibliography. FIXME: check whether this is true!

Because we are using a scratch counter `\count@`, we are vulnerable to other \TeX programmers who patch in to `natbib`'s processing and who might use that counter at the same time we are doing so. This is a potential source of trouble for us. FIXME: store the value of `\count@` in a private `\csname`!

Note that `\rtx@def@citea` begins the same as `\NAT@def@citea`, which it replaces, then makes further decisions based on the values of the counters.

Note also that, in `natbib`, the replacement part of `\NAT@def@citea@close` could be rewritten as `\NAT@def@citea\prepdef\@citea{\NAT@@close}`, which would them obviate the need for us to override its meaning.

Note, too, the effect of `\rtx@def@citea@box`, which replaces `\NAT@def@citea@box`, is almost the same as the latter, except the entire `\@citea` is given as the argument of `\NAT@mbox`.

Finally, bear in mind that the English (and some American editors) do not place a comma before the “and”; our procedures do (but they could be rewritten with that convention).

```

\NAT@bibsetnum We define the sectioning command to use when starting the bibliography and gently coax `natbib` into using the formatting procedures that *we* want it to use.

\NAT@bibsetup This way of setting up `thebibliography` automatically sets the label width based on the largest number used within the bibliography. This scheme will not work properly using the author/year style of bib entry, though.

\bibpreamble We define `\bibnumfmt` to be `\place@bibnumber`, which is a macro managed by REVTeX. If the document defines `\bibnumfmt`, then that definition will be used instead, which is what the `natbib` package gives as its programming interface.

\bibnumfmt We set `\NAT@merge` to `\tw@`, which turns on `natbib`'s `mcite` capabilities. This is the default setting. If numerical citations are not to be used, then `\NAT@merge` should be set to `\@one` (syntax is still enabled, but semantics are turned off).

\NAT@merge We set `\NAT@merge` to `\tw@`, which turns on `natbib`'s `mcite` capabilities. This is the default setting. If numerical citations are not to be used, then `\NAT@merge` should be set to `\@one` (syntax is still enabled, but semantics are turned off).

`\bibliographystyle` We arrange for the selection of bibliography style to occur either due to the document's explicit `\bibliographystyle` statement or via the journal substyle.

Note that REVTeX is incompatible with any package that patches `\bibliographystyle`. Since natbib does this, we need a fix.

The Boolean `\bibliographystyle@sw` signifies that the document contains explicit `\bibliographystyle` markup. If, on the contrary, the bibliography style is set by the the society or the journal, then no explicit `\bibliographystyle` command appears in the document instance. In this case `\bibliographystyle@sw` will be `\false@sw`.

`write@bibliographystyle` We wish to delay committing the `\bibliographystyle` until as late as possible. The journal substyle will define a default bibliography style, and the document's explicit `\bibliographystyle` command, if any, will override that default.

The `\bibstyle` command is allowed appear quite late in the `.aux` file. We now delay the automatic writing of the `\bibstyle` command to the end of the job.

The procedure `\write@bibliographystyle` tests whether a `\bibliographystyle` command has already been given. If not, it effectively executes the needed `\bibliographystyle` command, then neutralizes itself (we only need to do this once per job).

If the document lacks explicit `\bibliographystyle` markup, we execute `\@bibdataout@rev`, a hook for REVTeX-aware processing.

```

```

`\rtx@@citetp` We wish to extend `natbib` to move spaces and citations around a superscript-style citation, imitating Donald Arseneau's `cite` package with the `super`.
`\rtx@citex`
`\super@cite@let` The `\rtx@@citetp` procedure is substituted for `\NAT@@citetp`; it then calls
`\super@cite@end` the `\rtx@citex` procedure and implements the features of the `citeautoscript`
`\super@cite@swap` class option. In the end, `\@citex` is called with its customary parameters.

The document should be marked up as if citations were *not* superscripted, and then if you select a journal substyle that has superscripted citations, REVTeX will do its best to alter the formatting of the `\cites` to accomodate superscript style.

Only citations set as superscript are affected by this procedure, because we check `\@cite` against `\NAT@citesuper`.

Here's a subtle point: when is the argument of `\super@cite@swap` not the same as the token `\@let@token`? Answer: when the latter is `\@sptoken`! This case has to be handled separately.

Note that whether a punctuation is movable is determined by the definition of a particular control sequence name. A society or journal can alter things: to remove a character from the set, do, say, `\expandafter\let\csnamertx@automove;`

`\endcsname\relax`. To add a character to the set, do, say, `\expandafter\let\csnamertx@automove;`
`\endcsname\@empty`.

Implementation note: due to a T_EX peculiarity, we have to check for the case where `\@let@token` is a space token *before* we parse forward. At issue is the corner case where an end of file is at hand. If we were to let `\super@cite@swap` parse forward, we would encounter a T_EX end-of-file error. Note that the test will be true in many distinct cases: the file ends, the next character is a line terminator, the next character is a space.

The switchover to setting footnotes in the bibliography changes the meaning of `\footnote` and substitutes the synonym for `\@endnotesinbib`.

We arrange for the procedure `\make@footnote@endnote` to be executed at `\class@documenthook` time (we mustn't do this earlier because the meaning of `\@footnotemark` must not be changed before then, for the sake of `ltxutil.dtx`).

```
1612 \appdef\class@documenthook{%
1613   \make@footnote@endnote
1614 }%
```

<pre>\auto@bib \auto@bib@empty \test@bbl@sw \bibitem@set \auto@bib@innerbib \thebibliography@nogroup</pre>	<p>Under some circumstances, we must typeset the bibliography automatically. If the document requires footnotes to be set in the bibliography (effectively, class option <code>footinbib</code>), or that frontmatter footnotes be set in the bibliography (effectively, class option <code>bibnotes</code>), but contains no explicit <code>\bibliography</code> statement.</p> <p>Note that this facility is not able to work more than once per document. If multiple bibliographies are required (e.g., per article), it will be the responsibility of the journal style to restore <code>\auto@bib</code> to its original meaning so it can be re-invoked.</p>
--	---

In procedure `\auto@bib`, we first test for the presence of frontmatter footnotes deferred to the bibliography. If none, we further test for the presence of `\bibitem` commands in the job's `revtex4-2.dtx.bbl` file. If either condition is met, we ask for a bibliography. We know that the document itself lacks a `\bibliography` statement, so we know the argument of the `\bibliography` that we will issue.

```

17 Initial setup

The standard LaTeX document classes execute certain commands that are best deferred until `\class@documenthook` time. Here, we effectively split `\pagenumbering` into two halves, with a default definition for `\thepage` and an initialization of `\c@page` at `\class@documenthook` time.

The meaning of `\thepage` can be overridden by `society`, `journal`, or anywhere within the document preamble, and the counter itself will be preset at the beginning of the document.

```

1685 \def\thepage{\@arabic\c@page}%

Note that this code is executed at \setup@hook time to allow for the possibility
of overrides by packages like geometry.

1686 \appdef\setup@hook{%

```

`\open@onecolumn` When setting the column grid, we have to override the procedure for formatting lists. Because `\twocolumngrid` requires rebalancing columns at some points, typesetting must employ only the manipulation of `\leftskip` and `\rightskip`, and must avoid the use of `\moveleft`, `\moveright`, and `\parshape`.

It is one of the stranger features of T_EX that these two separate mechanisms exist. The latter three have the effect of adding things to the Main Vertical List

that cannot be removed and later added back with all their properties intact.

In detail, `\moveleft`, say, adds a box to the MVL with its reference point shifted horizontally by some amount relative to the reference point of the enclosing list. If that box is removed from the MVL (via a `\lastbox` operation in the output routine), and later thrown back to the MVL, the shift of the box will have been “forgotten” by \TeX . This is a bug, but not one “acceptable to D. E. Knuth”, so it will never be fixed.

19 Changing the page grid

19.1 Avoiding Grid Changes

In preprint styles, “wide text” is a no-op, and the title page processing involves no grid change.

`\title@column` Provide default meanings for `\title@column` and `\close@column`, in case they were never defined. Note that the society or journal substyle may define `\title@column` or `\close@column`: this code will not override.

```
1736 \def\title@column#1{%
1737   \minipagefootnote@init
1738   #1%
1739   \minipagefootnote@foot
1740 }%
1741 \def\close@column{%
1742   \newpage
1743 }%
```

19.2 Galley Style: Margin Changes

A variant of preprint processing. Emulate journal appearance somewhat.

`widetext@galley` DPC: We’re in galley style so do a lob sided display environment.

QUERY: How can we be sure that we are in galley style? ANSWER: as noted elsewhere, require that both `\twocolumn@sw` and `\preprintsty@sw` be false.

```

21 English-Language Texts

As this class is just for English language journals, we could hardwire these texts, but to make it easier to use this as a basis for the code for similar journal styles, separate out all the fixed text strings into babel-style macros of the form `\...name`

Note: for babel compatability, use version 1999/05/05 v3.6x or later.

Some of these might need changing in the society-specific code.

`\today` Procedure `\today` is used in the article class, but not in this document class.

```

1841 \def\today{\ifcase\month\or
1842   January\or February\or March\or April\or May\or June\or

24 Patches for lineno.sty

The `lineno` package detects the case where the package has been loaded and the document invokes `\linelabel`, but the `\linenumbers` command has not been issued: it treats this case as an error.

It is wrong for validity of document syntax to be dependent upon package semantics: we make the condition a warning rather than an error.

```

1996 \def\LN@LError@org{%
1997   \PackageError{lineno}{%
1998     \string\linelabel\space without \string\linenumbers
1999   }{%
2000     Just see documentation. (New feature v4.11)%
2001   }%
2002   \@gobble
2003 }%
2004 \def\LN@LError@ltx{%
2005   \PackageWarning{lineno}{%
2006     To make the \string\linelabel\space command work, you must issue the \string\linenumbers\ com
2007   }%
2008   \@gobble
2009 }%

```

If appropriate, enable line numbering within the abstract.

This mechanism applies generally: Create the box in a context in which the meaning of `\par` has been patched by `lineno`, then `\unvbox` the box in a context where `\set@linepenalties` has been executed, and follow up with `\@linenumberpar`, which forces a visit to the output routine just there. Note that here, we have to de-fang `\LN@parpgbrk`, which would otherwise causes the appearance of a box with depth -1000 points. Go figure.

```

2010 \appdef\class@documenthook{%
2011   \@ifx{\LN@LError\LN@LError@org}{%
2012     \class@info{Overriding \string\LN@LError}%

2019     }%
2020   }{}%
2021 }%

```

One may well ask: how to obtain line numbering within an alignment in a float? This objective, along with line numbering within footnotes, would require extraordinary measures. The float would have to be thrown onto the MVL in order to acquire its line numbers, but that fragment of MVL would then have to be protected from being shipped out. The question of how to coordinate those lines' numbers with those of lines in the MVL would also require dealing with.

25 Endgame for the Document Class

We provide for a “job macro package” that can override definitions and assignments made by the class or any other packages it loads.

25.1 Job Macro Package

You can create a “job macro package” for your document that will be read in automatically every time your document is processed. Thus, if your job is a file called `myarticle.tex`, then the file `myarticle.rty` will be read in just the same as if you had placed a `\usepackage{myarticle.rty}` statement immediately following your `\documentclass` statement.

Within your `.rty` file, you can define and use control sequence names that use the `@` character and you can override any of the definitions or assignments made by the REVTeX document class or the selected journal substyle. That is, you have the power to really mess things up badly.

If you choose to have a job macro package, you are well advised to read the L^AT_EX guide to document classes, `clsguide.tex` or read up on the subject in a book like the L^AT_EX Companion.

The file `template.rty` contains a template for creating your own job macro package.

```
2022 \appdef\rtx@require@packages{%  
2023 \InputIfFileExists{\jobname.rty}{-}{-}%  
2024 }%
```

25.2 Endgame Processing for the Document Class

The remaining steps in processing the document class involve determining the needed society, journal, and pointsize from the document’s class options and inputting the needed files or executing the indicated procedures.

Note that the society file is expected to declare options that will allow us to determine the journal involved, and the society and journal themselves determine the which pointsize options are declared, along with their meanings.

Note also that required packages are read in only after the document options have been processed, because the latter can affect the former.

Finally, the setup code is executed: this is code that depends on the meanings of the switches we define and on the code within the packages we load.

Note that there are other hooks in use: `\document@inithook`, which is executed right at the beginning of the document, and `\class@documenthook`, which serves as a vehicle for any `\AtBeginDocument` code we might wish to execute.

FIXME: use `\class@documenthook` only for things that bear on the MVL; use `\document@inithook` for all patches to procedures defined within the preamble.

Remember that `natbib` changes its state at `\AtBeginDocument` time, so we have to install our own code at a later point in the processing.

We determine the proper `\@society` by examining the document’s class options.

2025 \@parse@class@options@society

Then, we input the society's substyle (which may in turn lead to loading a journal substyle or a pointsize substyle). The substyle should not assume the value of any class option: instead, it should install code into \setup@hook.

2026 \@process@society{aps}%

Now that the society has defined the class options relating to journals, and has defined \@journal@default, we can process the journal substyle. We parse the options for one that sets \@journal.

2027 \@parse@class@options@\@journal

And we process the journal. Note that *it is an error* for a society file to fail to define \@journal@default.

2028 \expandafter\@process@journal\expandafter{\@journal@default}%

Now that the society and journal have finished defining any options relating to point size, we process the class options for any that set \@pointsize.

2029 \@parse@class@options@\@pointsize

And we process the pointsize. Note that it is an error for the society and journal to leave \@pointsize@default undefined at this point, however, the journal may have overridden the assignment of the society.

2030 \expandafter\@process@pointsize\expandafter{\@pointsize@default}%

Next, we process the class options for once and all. Doing so sets values for some of the Booleans that were introduced along with the \DeclareOption statements above.

CHANGE: We process the options in the order declared in the document; this gives the document greater control.

2031 \@options

Now that the class options have been processed, we can load all the packages that we know need loading.

2032 \rtx@require@packages

At this point, the society substyle, the journal substyle, and the pointsize have all been processed, along with the document class options. Some of these have left things for later; we do these now.

\setup@hook This portion of the code for this class file *must* appear at the very end: The procedure \setup@hook should be executed at the very end of the class file. Any code that relies on the value of any of the @sw switches or will patch the code of one of the required packages should be executed here.

2033 \appdef\setup@hook{\normalsize}%

2034 \setup@hook

Warn if past maturation date. This code to be enabled only in beta software.

31 The aps class extension: the aps module

The file `aps.rtx` is read in by the `revtex4` document class if `\@society` has the value `aps`.

Here, code specific to APS journals is separated out from the REVTeX document class. (Other societies can customize REVTeX by supplying their own .rtx file.)

This class extension file is a model for a class extension you might write yourself.

First, incorporate a \ProvidesFile command with an optional argument giving the version information, e.g.,

```
% \ProvidesFile{foo}[2001/09/11 v1.1 Docinfo]%
%
```

Within the society substyle, there are two things we must do as well: define the default journal,

```
% \def\@journal@default{pra}%
%
```

And do likewise for the point size:

```
% \def\@pointsize@default{10}%
%
```

We first define some text entities (amounting to journal abbreviations), then some APS-specific initializations, then code for particular APS journals. In the latter case, the choice is keyed off the macro \@journal.

```
2560 %< *aps>
```

31.1 Defend Against Forseeable Errors

Protect this file from being read in by anything but REVTeX.

```
2561 \ifx\undefined\substyle@ext
2562 \def\@tempa{%
2563 \endinput
2564 \GenericWarning{I must be read in by REVTeX! (Bailing out)}%
2565 }%
2566 \expandafter\else
2567 \def\@tempa{%
2568 \expandafter\fi\@tempa
2569 \class@info{RevTeX society APS selected}%
```

Here are the class options relating to the APS:

```

31.3 APS Setup

Here we define the default procedures for APS journals. Individual APS journals may override these definitions.

31.3.1 Title block

The specifics of the title block. Apply to all APS journals; individual journals may override these settings.

`\@fnsymbol` The L^AT_EX kernel definition of `\@fnsymbol` is overridden. The definition in `revtex4-2.dtxfixltx2e.sty` serves as a guide to the new way to symbol, working in both text- and math modes.

`revtex4-2.dtxfixltx2e.sty` duplicates some features of `revtex4-2.dtxltxgrid` and `revtex4-2.dtxltxutil`, however, so it may be incompatible with REV_TE_X. In case it is not loaded, we must provide a meaning for `\TextOrMath`, which that package makes robust. I believe that it is `\@fnsymbol` itself that ought to be robustified. e_TE_X further complicates matters; we do not especially accomodate it.

Not! `\TextOrMath` must be made robust in any case (Bug 530). I return things to follow core L^AT_EX 2_ε (`revtex4-2.dtxlatex.ltx`).

```

All APS journal preprints use separate titlepage and full-width abstract.

In effect, we establish a society default value for `\preprintsty@sw`, and for `\titlepage@sw`.

```

2697 \@booleanfalse\preprintsty@sw
2698 \@booleanfalse\titlepage@sw

```

We choose the page style for all APS journals. The journal may override by inserting its own code in `\setup@hook`. Users wishing to customize their documents will be able to invoke a `\pagestyle` command anywhere in the preamble; it will override the assignments here.

Here is the big switch for APS preprints. Note that `\preprintsty@swis` also consulted in various procedures, but we assume its value does not change after `\setup@hook` time.

```

Note that in the following, we wish to set the section head uppercase, so we use David Carlisle's `\MakeTextUppercase`. However, because this procedure effectively parses its argument (looking for things to *not* translate), it has to be invoked in such a way that the argument of the `\section` command is passed to it as its own argument.

To accomplish this, we use the `\@hangfrom@` hook, which was developed for this purpose.

31.3.9 Bibliography

Customize REVTeX for the journal substyle; this task requires three components: the BibTeX `apsrev.bst` and `apsrmp.bst` style files, and customizations of the `thebibliography` environment.

`\@bibstyle` Define the argument of the `\bibliographystyle` command (if the document does not do so). The user must have installed a `.bst` file of the corresponding name. This file will then be used by BibTeX when compiling the document's `.bbl` file.

To generate `apsrev.bst`, use `custom-bib` version 4.21 or later. Run the `.bst` generator, `makebst.tex`, and accept all defaults, with the following exceptions:

1. LANGUAGE FIELD: **l:** `lang`—Use language field to switch hyphenation patterns for title
2. PRESENTATIONS: **b:** `pres,pres-bf`—Presentation, speaker bold face
3. ORDERING OF REFERENCES: **c:** `seq-no`—Citation order (unsorted, like `unsrt.bst`)

4. ORDER ON VON PART: **x: vonx**—Sort without von part (de la Maire after Mahone)
5. AUTHOR NAMES: **i: nm-init,ed-au**—Initials + surname (J. F. Smith)
6. POSITION OF JUNIOR: ***: jnr1st**—Junior comes last as Smith, John, Jr.
7. TYPEFACE FOR AUTHORS IN LIST OF REFERENCES: **u: nmft,nmft-def**—User defined author font (`\bibnamefont`)
8. FONT FOR FIRST NAMES: **u: fnm-def**—First names in user defined font (`\bibfnamefont`)
9. EDITOR NAMES IN INCOLLECTION ETC: **a: nmfted**—Editors in collection like authors font
10. FONT FOR ‘AND’ IN LIST: **r: nmand-rm**—‘And’ in normal font (JONES and JAMES)
11. FONT OF CITATION LABELS IN TEXT: **u: lab,lab-def**—User defined citation font (`\citenamefont`)
12. FONT FOR ‘AND’ IN CITATIONS: **r: and-rm**—Cited ‘and’ in normal font
13. DATE FORMAT: ***: yr-par**—Date in parentheses as (May 1993)
14. DATE EMPTY: **-: date-nil-x**—If date is empty, then do not produce the surrounding punctuation (parens, brackets, colon, comma)
15. TITLE OF ARTICLE: **d: tit-qq**—Title and punctuation in double quotes (“Title,” ..)
16. INPROCEEDINGS CHAPTER AND PAGES, LIKE INBOOK: **-: inproceedings-chapter**—produce pages after chapter, just as in InBook
17. TITLE PRESENT IN ARTICLE, INCOLLECTION, AND INPROCEEDINGS: **x: jtit-x**—Title is ignored
18. INPROCEEDINGS CHAPTER AND PAGES, LIKE INBOOK: **y: inproceedings-chapter**—produce pages after chapter, just as in InBook
19. ARTICLE BOOKTITLE PRESENT: **: article-booktitle**—format booktitle
20. ARTICLE SERIES PRESENT: **: article-series**—article can has series
21. JOURNAL NAME FONT: **r: jttl-rm**—Journal name normal font
22. JOURNAL NAME WITH ADDRESS: **y: journal-address**—Include address field (in parentheses) along with journal name
23. BOOK TITLE FIELDS: **y: book-bt**—Field ‘booktitle’, or if absent field ‘title’, is book title

24. THESIS TITLE OPTIONAL: : `thesis-title-o`—Title is optional: no warning issued if empty
25. TECHNICAL REPORT TITLE: **b**: `trtit-b`—Tech. report title like books
26. TECHNICAL REPORT INSTITUTION: : `techreport-institution-par`—format tech report institution like book publisher
27. JOURNAL VOLUME: **b**: `vol-bf`—Volume bold as `vol(num)`
28. JOURNAL VOL AND NUMBER: **x**: `vnum-x`—Journal vol, without number as 34
29. VOLUME PUNCTUATION: **c**: `volp-com`—Volume with comma as `vol(num),`
ppp
30. PAGE NUMBERS: **f**: `jpg-1`—Only start page number
31. BOOK EDITOR W/O AUTHOR: : `book-editor-booktitle`—Book permits empty author, produces title before editor in this case
32. INBOOK PERMITS TITLE, BOOKTITLE, AUTHOR, EDITOR: **a**: `inbook-editor-booktitle`—Allow using both title/booktitle, both author/editor
33. CONFERENCE ADDRESS FOR BOOK, INBOOK, INCOLLECTION, IN-PROCEEDINGS, PROCEEDINGS: **a**: `bookaddress`—Italic booktitle followed by bookaddress in roman
34. NUMBER AND SERIES FOR BOOK, INBOOK, INCOLLECTION, IN-PROCEEDINGS, PROCEEDINGS: *: `num-xser`—Allows number without series and suppresses word "number"
35. WORD NUMBER CAPITALIZED FOR NUMBER AND SERIES: **c**: `number-cap`—Capitalize word 'number' as: "Number 123"
36. WORD CHAPTER CAPITALIZED: **c**: `chapter-cap`—Capitalize word 'chapter' as: 'Chapter 42'
37. COMBINING NUMBER AND SERIES: **x**: `series-number`—Series number as: 'Springer Lecture Notes No. 125'
38. POSITION OF NUMBER AND SERIES: **b**: `numser-booktitle`—After book title and conference address, and before editors
39. VOLUME AND SERIES FOR BOOKS/COLLECTIONS: **s**: `ser-vol`—Series, vol. 23
40. VOLUME AND SERIES FORMATTING: **y**: `ser-rm`—format series roman, even when used with volume
41. WORD VOLUME CAPITALIZED FOR VOLUME AND SERIES: **y**: `volume-cap`—Capitalize word 'volume', as: 'Volume 7 in Lecture Series'

42. POSITION OF VOLUME AND SERIES FOR INCOLLECTION, INBOOK, AND INPROCEEDINGS: **e: ser-ed**—Series and volume after booktitle and before editors
43. JOURNAL NAME PUNCTUATION: **x: jnm-x**—Space after journal name
44. PAGES IN BOOK: ***: pg-bk,book-chapter-pages**—As chapter and page: chapter 42, page 345
45. PUBLISHER IN PARENTHESES: **d: pub-date**—Publisher with address and date in parentheses (Oxford, 1994)
46. EMPTY PUBLISHER PARENTHESES: **y: ay-empty-pub-parens-x**—eliminate parentheses altogether if nothing inside
47. PUBLISHER POSITION: **: pre-pub**—Publisher before volume, chapter, pages
48. **: : pre-edn**—Edition before publisher
49. **: p: pre-pub,pre-edn**—Edition, publisher, volume, chapter, pages
50. ISBN NUMBER: ***: isbn**—Include ISBN for books, booklets, etc.
51. ISSN NUMBER: ***: issn**—Include ISSN for periodicals
52. DOI NUMBER: **a: doi-link,doi**—Doi forms a link to the publication, anchored to the volume or title
53. EDITOR IN COLLECTIONS: **b: edby**—In booktitle, edited by .. (where .. is names)
54. PUNCTUATION BETWEEN SECTIONS (BLOCKS): **c: blk-com**—Comma between blocks
55. FINAL PUNCTUATION: **c: fin-endbibitem**—Command at end instead of period
56. ABBREVIATE WORD ‘PAGES’: **a: pp**—‘Page’ abbreviated as p. or pp.
57. ABBREVIATE WORD ‘EDITORS’: **a: ed**—‘Editor’ abbreviated as ed. or eds.
58. OTHER ABBREVIATIONS: **a: abr**—Abbreviations of such words
59. ABBREVIATION FOR ‘EDITION’: **a: ednx**—‘Edition’ abbreviated as ‘ed’
60. EDITION NUMBERS: **n: ord**—Numerical editions as 1st, 2nd, 3rd, etc
61. STORED JOURNAL NAMES: **a: jabr**—Abbreviated journal names
62. FONT OF ‘ET AL’: **i: etal-it**—Italic et al

63. ADDITIONAL REVTeX DATA FIELDS: **r:** `revdata,eprint,url,url-blk,translation`—Include REVTeX data fields `collaboration`, `eid`, `eprint`, `archive`, `url`, `translation`
64. SLACcitation FIELD: **:** `SLACcitation`—Produce SLACcitation field
65. NUMPAGES DATA FIELD: *****: `numpages-x`—Do not include `numpages` field
66. URL ADDRESS: *****: `url,url-prefix-x`—URL without prefix (default: 'URL ')
67. REFERENCE COMPONENT TAGS: **b:** `bibinfo`—Reference component tags like `\bibinfo` in the content of `\bibitem`
68. ELEMENT TAGS: **b:** `bibfield`—Element tags like `\bibfield` in the content of `\bibitem`
69. COMPATIBILITY WITH PLAIN TEX: *****: `nfss`—Use LaTeX commands which may not work with Plain TeX

A file `apsrev.dbj` file equivalent to the following should result:

```

31.3.10 Comparing `apsrev.bst` and `apsrmp.bst`

These two bibliographic styles differ as follows: `apsrev.dbj` has the following guard codes, which `apsrmp.dbj` does not:

- `seq-no`— Citation order (unsorted, like `unsrt.bst`)
- `nm-init,ed-au`— Initials + surname (J. F. Smith)
- `blkyear`— Missing date left blank
- `date-nil-x`— If date is empty, then do not produce the surrounding punctuation (parens, brackets, colon, comma)
- `inproceedings-chapter`— produce pages after chapter, just as in `InBook`
- `techreport-institution-par`— format tech report institution like book publisher
- `vnum-x`— Journal vol, without number as ‘34’
- `pub-date`— Publisher with address and date in parentheses (Oxford, 1994)
- `pre-pub`— Edition, publisher, volume, chapter, pages. Note that both use guard code `pre-edn`.

`apsrmp.dbj` has the following guard codes, which `apsrev.dbj` does not:

- `nm-rev1`— Only first name reversed, initials (AGU style: Smith, J. F., H. K. Jones)
- `dt-beg`— Date after authors
- `vnum-sp`— Journal vol (num) as ‘34 (2)’
- `pp-last`— Pages at end, but before any notes

- `pub-par`— Publisher in parentheses
- `school-par`— School/address in parens: ‘(school, address)’
- `bkedcap`— ‘Name Editor,’ as above, editor upper case
- `and-com`— Comma even with 2 authors as ‘Tom, and Harry’

We ensure that the journal substyle has the first word in the matter by installing the (default) APS code later on (see Section 31.6).

`\authoryear@sw` Numerical citations: default value of `\authoryear@sw` is false.

```
3017 \@booleanfalse\authoryear@sw
```

`\bibpunct` The following commands effectively establish the style in which `\cite` commands are formatted. You can think of them as the second needed component for the bibliography.

Set up for APS numerical citations (once the packages are loaded). The journal substyle can override these choices.

Note that, prior to `natbib` version 8.21, changing `\NAT@sort` at this late hour would not be totally effective; you would have to give `natbib` the relevant options at load time. From version 8.21 on, `\NAT@sort` and `\NAT@cmprs` are not bound at all.

```
3018 \appdef\setup@hook{%
3019 \bibpunct{[]}{},{}{n}{}{,}%
3020 }%
```

`\pre@bibdata` Set up to write endnotes to a .bib file; its data will be incorporated into the bibliography.

```
3021 \def\pre@bibdata{\jobname\bibdata@app}%
```

`\bibsection` We define the sectioning command to use when starting the bibliography.

31.4 Journal- and Pointsize-Specific Code

After this substyle is read in, we will execute the code specific to the selected journal: execute the `society/journal .rtx` file if it exists, or execute the `society/journal` macro (if the latter is not defined, it will `\relax` out). Here we define the default journal.

```

3094 \def\@journal@default{pra}%

```

31.5 Typesize-Specific Code

After this `society` file is read in, we will process the `\@pointsizes`-specific code. Here we define the default.

```

3095 \def\@pointsizes@default{10}%

```

Note: the convention in REV_{TEX} and its substyles is that the substyle must not override any explicit class options declared by the document. This means that the various Booleans of Section 9 may be assigned here only if they are still undefined at this point.

For the APS, we supply code specific to journals PRA, PRB, PRC, PRD, PRE, PRL, PRX, PRAPPLIED, PRMATERIALS, PRFLUIDS, PRAB (was PRSTAB), PRPER (was PRSTPER), and RMP. At present, they are identical, with the exception of PRL and RMP. We also introduce a new generic `physrev` style now that all of the Phys. Rev. journals are identical. In 4.2, we make the inclusion of titles in the bibliography the default.

For most all of the APS journals, the journal-dependent code is relatively meager and is therefore embedded in this file. However, the RMP code is sufficiently extensive that splitting it out into a separate file is more convenient.

31.5.1 pra

If this option has been selected, we will read in the needed code from the file apsrmp.rtx.

31.6 Establish APS Defaults

\footinbib@sw All APS journals except RMP effectively invoke the footinbib option. We rely on the RMP-specific code to override this assignment.

```
3194 \@booleantrue\footinbib@sw
```

\@bibdataout@init Procedure \@bibdataout@aps has the job of writing the control record into the job's \jobnamerevtex4-2.dtx.bib file, where it will adjust the options to revtex4-2.dtx.bst processing. It is installed into the initialization procedure \@bibdataout@init, and its meaning is set by the society (APS) and journal. For all but RMP, we select the Physical Review style. For the latter case, we change the meaning, per the code in apsrmp.rtx.

```

31.7 APS Sanity Checking

Rule: if \place@bibnumber is \place@bibnumber@sup (citations are numbered and set superscript), then it makes no sense for \footinbib@sw to be \false@sw (footnotes set in the bibliography, as endnotes). If both conditions prevailed, then the document would have footnotes and citations both as superscript arabic numbers, but independently numbered, which would be confusing.

Any society that provides for both superscript numbered citations as well as for numbered footnotes should check for this same condition, and deal with it.

Note: an alternative would be for footnotes to use the same sequence of footnote devices that are used by the frontmatter footnotes (`\frontmatter@thefootnote` instead of arabic numbers).

In this case, we would want to refrain from resetting `\c@footnote` at the end of the title page formatting. We would also want to treat body footnotes identically to frontmatter footnotes: the assignments in `\titleblock@produce` would persist throughout the document.

But APS do not choose to go that route.

```

3213 \appdef\setup@hook{%
3214   \ifx{\place@bibnumber\place@bibnumber@sup}{%
3215     \footinbib@sw}{%
3216       \class@warn{Citations are superscript numbers: footnotes must be endnotes; changing to that
3217         \@booleantrue\footinbib@sw
3218     }%
3219   }{}%
3220 }%
```

Here ends the substyle for society APS.

```

3221 %</aps>
```

32 The rmp journal substyle: the rmp module

The file `apsrmp.rtx` is read in by the `revtex4` document class if `\@society` has the value `aps` and `\@journal` has the value `rmp`.

It is read at the end of the `aps.rtx`, so all definitions and assignments in that file are operative unless overridden here.

```

3222 %<*rmp>
```

Protect this file from being read in by anything but REVTeX.

```

3223 \ifx\undefined\substyle@ext

```

In RMP, put a period (.), followed by ‘nut space’, after the section number. Also, hang the section number (the L^AT_EX default).

```

3340 \def\@secntformat#1{\csname the#1\endcsname.\hskip0.5em\relax}%

```

Note that we wish to set the section head uppercase, so we use David Carlisle’s `\MakeTextUppercase`. However, because this procedure effectively parses its argument (looking for things to *not* translate), it has to be invoked in such a way that the argument of the `\section` command is passed to it as its own argument.

To accomplish this, we use the `\@hangfrom@` hook, which was developed for this purpose.

```

33.4 Citations and Bibliography

Customize REV_T_EX for the journal substyle; this task requires three components: a BIB_T_EX .bst style file, customizing code for natbib, and customizations of the thebibliography environment.

\@bibstyle Define the argument of the **\bibliographystyle** command (if the document does not do so).

The user must have installed a .bst file of the corresponding name. This file will then be used by BIB_T_EX when compiling the document's .bbl file.

To generate **apsrmp.bst**, use **custom-bib** version 3.89d1 or later. Run the .bst generator, **makebst.tex**, with the following options:

1. STYLE OF CITATIONS: **a: ay**—Author-year with some non-standard interface
2. AUTHOR: ***: nat**—Natbib for use with natbib v5.3 or later
3. LANGUAGE FIELD: **l: lang**—Use language field to switch hyphenation patterns for title
4. PRESENTATIONS: **b: pres,pres-bf**—Presentation, speaker bold face
5. ORDER ON VON PART : **x: vonx**—Sort without von part (de la Maire after Mahone)
6. AUTHOR NAMES: **a: nm-rev1**—Only first name reversed, initials (AGU style: Smith, J. F., H. K. Jones)
7. POSITION OF JUNIOR : ***: jnrlst**—Junior comes last as Smith, John, Jr.
8. TYPEFACE FOR AUTHORS IN LIST OF REFERENCES: **u: nmft,nmft-def**—User defined author font (**\bibnamefont**)
9. FONT FOR FIRST NAMES : **u: fnm-def**—First names in user defined font (**\bibfnamefont**)
10. EDITOR NAMES IN INCOLLECTION ETC: **a: nmfted**—Editors in collection like authors font
11. FONT FOR 'AND' IN LIST: **r: nmand-rm**—'And' in normal font (JONES and JAMES)
12. FONT OF CITATION LABELS IN TEXT : **u: lab,lab-def**—User defined citation font (**\citenamefont**)

13. FONT FOR ‘AND’ IN CITATIONS : **r: and-rm**—Cited ‘and’ in normal font
14. LABEL WHEN AUTHORS MISSING : ***: keyxyr**—Year blank when KEY replaces missing author (for natbib 7.0)
15. DATE POSITION: **b: dt-beg**—Date after authors
16. DATE FORMAT : **m: yr-com**—Date preceded by comma as ‘, 1993’
17. INCLUDE MONTHS: **m: aymth**—Include month in date
18. REVERSED DATE : **r: dtrev**—Date as year month
19. TRUNCATE YEAR : ***: note-yr**—Year text full as 1990–1993 or ‘in press’
20. TITLE OF ARTICLE: **d: tit-qq**—Title and punctuation in double quotes (“Title,” ..)
21. TITLE PRESENT IN ARTICLE, INCOLLECTION, AND INPROCEEDINGS: **x: jtit-x**—Title is ignored
22. INPROCEEDINGS CHAPTER AND PAGES, LIKE INBOOK: **y: inproceedings-chapter**—produce pages after chapter just as in InBook
23. ARTICLE BOOKTITLE PRESENT: **?: article-booktitle**—format book-title
24. ARTICLE SERIES PRESENT: **?: article-series**—article can has series
25. JOURNAL NAME FONT: **r: jttl-rm**—Journal name normal font
26. JOURNAL NAME WITH ADDRESS: **y: journal-address**—Include address field (in parentheses) along with journal name
27. BOOK TITLE FIELDS: **y: book-bt**—Field ‘booktitle’, or if absent field ‘title’, is book title
28. THESIS TITLE OPTIONAL: **?: thesis-title-o**—Title is optional: no warning issued if empty
29. TECHNICAL REPORT TITLE: **b: trtit-b**—Tech. report title like books
30. JOURNAL VOLUME: **b: vol-bf**—Volume bold as **vol**(num)
31. JOURNAL VOL AND NUMBER: **s: vnum-sp**—Journal vol (num) as 34 (2)
32. VOLUME PUNCTUATION: **c: volp-com**—Volume with comma as vol(num), ppp
33. PAGE NUMBERS: **f: jpg-1**—Only start page number
34. POSITION OF PAGES: **e: pp-last**—Pages at end but before any notes

35. BOOK EDITOR W/O AUTHOR: : **book-editor-booktitle**—Book permits empty author, produces title before editor in this case
36. INBOOK PERMITS TITLE, BOOKTITLE, AUTHOR, EDITOR: **a: inbook-editor-booktitle**—Allow using both title/booktitle, both author/editor
37. CONFERENCE ADDRESS FOR BOOK, INBOOK, INCOLLECTION, INPROCEEDINGS, PROCEEDINGS: **a: bookaddress**—Italic booktitle followed by bookaddress in roman
38. NUMBER AND SERIES FOR BOOK, INBOOK, INCOLLECTION, INPROCEEDINGS, PROCEEDINGS: ***: num-xser**—Allows number without series and suppresses word "number"
39. WORD NUMBER CAPITALIZED FOR NUMBER AND SERIES: **c: number-cap**—Capitalize word 'number' as: "Number 123"
40. WORD CHAPTER CAPITALIZED: **c: chapter-cap**—Capitalize word 'chapter' as: 'Chapter 42'
41. COMBINING NUMBER AND SERIES: **x: series-number**—Series number as: 'Springer Lecture Notes No. 125'
42. POSITION OF NUMBER AND SERIES: **b: numser-booktitle**—After book title and conference address, and before editors
43. VOLUME AND SERIES FOR BOOKS: **s: ser-vol**—Series, vol. 23
44. VOLUME AND SERIES FORMATTING: **y: ser-rm**—format series roman, even when used with volume
45. WORD VOLUME CAPITALIZED FOR VOLUME AND SERIES: **y: volume-cap**—Capitalize word 'volume', as: 'Volume 7 in Lecture Series'
46. POSITION OF VOLUME AND SERIES FOR INCOLLECTION, INBOOK, AND INPROCEEDINGS: **e: ser-ed**—Series and volume after booktitle and before editors
47. JOURNAL NAME PUNCTUATION: **x: jnm-x**—Space after journal name
48. PAGES IN BOOK: ***: pg-bk, book-chapter-pages**—As chapter and page: chapter 42, page 345
49. PUBLISHER IN PARENTHESES: **p: pub-par**—Publisher in parentheses
50. EMPTY PUBLISHER PARENTHESES: **y: ay-empty-pub-parens-x**—eliminate parentheses altogether if nothing inside
51. PUBLISHER POSITION: **e: pre-edn**—Edition before publisher
52. SCHOOL: **p: school-par**—school/address in parens: '(school, address)'

53. ISBN NUMBER: *: `isbn`—Include ISBN for books, booklets, etc.
54. ISSN NUMBER: *: `issn`—Include ISSN for periodicals
55. DOI NUMBER: a: `doi-link,doi`—Doi forms a link to the publication, anchored to the volume or title
56. ‘EDITOR’ AFTER NAMES: a: `bkedcap`—‘Name Editor,’ as above, editor upper case
57. EDITOR IN COLLECTIONS: b: `edby`—In booktitle, edited by .. (where .. is names)
58. PUNCTUATION BETWEEN SECTIONS : c: `blk-com`—Comma between blocks
59. FINAL PUNCTUATION: c: `fin-endsbibitem`—Command at end instead of period
60. ABBREVIATE WORD ‘PAGES’ : a: `pp`—‘Page’ abbreviated as p. or pp.
61. ABBREVIATE WORD ‘EDITORS’: a: `ed`—‘Editor’ abbreviated as ed. or eds.
62. OTHER ABBREVIATIONS: a: `abr`—Abbreviations of such words
63. ABBREVIATION FOR ‘EDITION’ : a: `ednx`—‘Edition’ abbreviated as ‘ed’
64. EDITION NUMBERS: n: `ord`—Numerical editions as 1st, 2nd, 3rd, etc
65. STORED JOURNAL NAMES: a: `jabr`—Abbreviated journal names
66. COMMA BEFORE ‘AND’: c: `and-com`—Comma even with 2 authors as ‘Tom, and Harry’
67. FONT OF ‘ET AL’: i: `etal-it`—Italic et al
68. ADDITIONAL REVTeX DATA FIELDS: r: `revdata,eprint,url,url-blk,translation`—Include REVTeX data fields collaboration, eid, eprint, archive, url, translation
69. SLACcitation FIELD: ?: `SLACcitation`—Produce SLACcitation field
70. Numpages DATA FIELD: *: `numpages-x`—Do not include numpages field
71. REFERENCE COMPONENT TAGS: b: `bibinfo`—Reference component tags like `\bibinfo` in the content of `\bibitem`
72. ELEMENT TAGS: b: `bibfield`—Element tags like `\bibfield` in the content of `\bibitem`
73. COMPATIBILITY WITH PLAIN TEX: *: `nfss`—Use LaTeX commands which may not work with Plain TeX

A file `apsrmp.dbj` file equivalent to the following should result:

```

For a comparison between `apsrmp.bst` and `apsrev.bst`, see Section 31.3.10.

```

3409 \def\@bibstyle{apsrmp\substyle@post}%

\authoryear@sw Author-year citations: default value of \authoryear@sw is true.
3410 \@booleantrue\authoryear@sw

\@bibdataout@rmp When the journal is RMP, the meaning of the procedure \@bibdataout@aps needs
to be different because of the way the author names are formatted. In other
respects, it is the same.
3411 \def\@bibdataout@aps{%
3412 \immediate\write\@bibdataout{%
An entry that controls processing of the revtex4-2.dtx.bst file has entry type
@CONTROL. This entry's cite key is apsrmp41Control, which serves as a version
number.
3413 @CONTROL{%
3414 apsrmp41Control%
Say whether we want long bibliography style (the default), or the abbreviated
style.
3415 \longbibliography@sw{%

3422 \if@filesw
3423 \immediate\write\@auxout{\string\citation{apsrmp41Control}}%
3424 \fi
3425 }%

\bibpunct The following commands effectively establish the style in which \cite commands
\bibsection are formatted. You can think of them as the second needed component for the
\bibpreamble bibliography.
\newblock Set up for author-year citations: when \NAT@set@cites executes (at \begin{document}
\bibhang time), the \@biblabel will be set to \NAT@biblabel.
\bibsep Per Karie Friedman (friedman@phys.washington.edu), multiple citations are
\cite separated by semicolons, e.g., (Jones, 1999; Abbott and Smith, 2000; Wortley,
2001a), and multiple citations by the same author by commas, e.g., Abela et al.
(1995, 1997a, 1997b). The third argument of \bibpunct handles the former.
The fifth argument puts a comma after the author when the year is not in
parens: (Lee et al., 1996).
Incidentally, this \bibpunct command specifies the natbib default values.
We define the sectioning command to use when starting the bibliography.
We change natbib's \NAT@def@citea procedure to effect more elaborate
punctuation for RMP: see item 473: \cite order punctuation: "If possible,
```

`\textcites` should put the word 'and' between two citations and before the last citation in a list of 3 or more."

3426 `\appdef\setup@hook{%`

We define the punctuation to use in the `\cite` command's production.

3427 `\bibpunct{(%`

3428 `}{%(`

3429 `)}{;}{a}{f,}{f,}%`

We define the sectioning command to use when starting the bibliography.

3430 `\def\bibsection{%`

3431 `\expandafter\section\expandafter*\expandafter{\refname}%`

3432 `\@nobreaktrue`

3433 `}%`

3434 `\let\bibpreamble\@empty`

3435 `\def\newblock{\ }%`

3436 `\bibhang10\p@`

3437 `\bibsep\z@`

Per Mark Doyle, `\cite` is mapped to `\citep` in RMP.

3438 `\let\cite\citep`

End of code to be delayed until after `natbib` loads.

3439 `}%`

`\footinbib@sw` Footnotes in bibliography are consistent only with numbered citations, and are particularly nasty under `natbib`: the package will automatically change to numbered references if any `\bibitem` commands lack the optional argument. Therefore, we must uninvoke it now, even if invoked by the document. The same is quietly done with `natbib`'s `mcite` and `compress` options.

(AO 523) I changed the code that alters `\NAT@merge` so that it will not override when `\NAT@merge` has been set to `\z@`.

3440 `\@booleanfalse\footinbib@sw`

3441 `\appdef\setup@hook{%`

3442 `\footinbib@sw{%`

3443 `\class@warn{%`

3444 `Footnotes in bibliography are incompatible with RMP.^^J%`

3445 `Undoing the footinbib option.`

3446 `}%`

3447 `\@booleanfalse\footinbib@sw`

3448 `}{ }%`

3449 `\@ifnum{\NAT@merge>\@ne}{\let\NAT@merge\@ne}{ }%`

3450 `\def\NAT@cmprs{\z@}%`

3451 `}%`

`\eprint` RMP requires the `\eprint` field in the bib entry to be set off with the word "eprint".

3452 `\def\eprint#1{eprint #1}%`

33.5 Table of Contents

We set up for auto-sizing of certain TOC elements.

To do this, we override the definitions for the default TOC font (`\toc@font`), and define formatting for the needed elements (`\l@...`). Finally, we activate the autosizing by assigning `\toc@pre` and `\toc@post`.

`\toc@font` Set the formatting characteristics of the auto-indenting part of the TOC.

```
3453 \def\toc@font{%
3454   \footnotesize\rmfamily
3455   \def\{\space\ignorespaces}%
3456 }%
3457 \def\ltxu@dotsep{5.5pt}%
```

`\l@section` Determine which TOC elements are automatically indented.

```
3458 \def\tocleft@{\z@}%
3459 \def\tocdim@min{5\p@}%
3460 \def\l@section{%
3461   \l@sections{}\section}% Implicit #3#4
3462 }%
3463 \def\l@subsection{%
3464   \l@sections{section}{subsection}% Implicit #3#4
3465 }%
3466 \def\l@subsubsection{%
3467   \l@sections{subsection}{subsubsection}% Implicit #3#4
3468 }%
3469 %\def\l@subsubsection#1#2{%
3470 \def\l@paragraph#1#2{%
3471 \def\l@subparagraph#1#2{%
```

Activate the TOC processing.

```
3472 \let\toc@pre\toc@pre@auto
3473 \let\toc@post\toc@post@auto
3474 %</rmp>
```

Here ends the programmer's documentation.

<code>\bibAnnote:</code> (AO, 549) Repairing natbib's <code>\BibitemShut</code> and <code>\bibAnnote</code>	54			

<code>\save@note:</code> (AO, 572)	<code>widetext@grid:</code> (AO) fine-tune spacing above and below widetext 71
Independent footnote counter for title block. Abstract footnote counter shared with body. 61	4.1o
<code>\thebibliography@nogroup:</code> (AO, 572) Independent footnote counter for title block. Abstract footnote counter shared with body. 66	<code>\@bibdataout@aps:</code> (AO, 580) Control .bst at run time. 64, 120 (AO, 580) Provide a document class option to turn off production of eprint field in bibliography. 64
General: (AO) fine-tune spacing above and below widetext 5	<code>\@bibdataout@rmp:</code> (AO, 580) Control .bst at run time. . . . 133
(AO, 565) restore 4.0 behavior: invoking class option preprint implies class option preprintnumbers 5	<code>\@endnotetext:</code> (AO, 579) Endnote shall comprise their own BibTeX entry type: @FOOTNOTE. 63
(AO, 566) restore 4.0 behavior: flush column bottoms . . . 5, 105	<code>\bibAnnote:</code> (AO, 549) Remove patch to natbib, which is now at version 8.31a 54
(AO, 569) Use of <code>hyperref</code> interferes with column balancing of last page 5	(AO, 578) accommodate the possible space character preceding <code>\BibitemShut</code> 54
(AO, 569) execute the after-last-shipout procedures from within the safety of the output routine 5	<code>\eprint@enable@sw:</code> (AO, 580) Provide a document class option to turn off production of eprint field in bibliography. . . 21
(AO, 571) Interface <code>\set@footnotewidth</code> for determining the set width of footnotes 5	<code>\present@bibnote:</code> (AO, 575) Automatically incorporate the (BibTeX-generated) .bbl into an explicit <code>thebibliography</code> . 58
(AO, 571) class file must set <code>\splittopskip</code> ; fine tune <code>\skip\footins</code> ; <code>\footnoterule</code> defined in terms of <code>\skip\footins</code> 5, 86, 87, 92, 125	<code>\thebibliography@nogroup:</code> (AO, 575) Automatically incorporate the (BibTeX-generated) .bbl into an explicit <code>thebibliography</code> 66
(AO, 572) Independent footnote counter for title block. Abstract footnote counter shared with body. 5	General: (AO, 549) Remove patch to natbib, which is now at version 8.31a 5
(AO, 572) <code>\@makefnstext</code> and <code>\frontmatter@makefnstext</code> must be defined harmoniously 5, 106	(AO, 575) Automatically incorporate the (BibTeX-generated) .bbl into an explicit <code>thebibliography</code> . . 5
(AO, 573) arrange to load <code>lineno</code> after any other packages. 5	(AO, 578) accommodate the possible space character preceding <code>\BibitemShut</code> . . . 5, 56
(AO, 575) the default for journal prstper is longbibliography . . . 5	(AO, 579) Endnote shall comprise their own BibTeX entry type: @FOOTNOTE. . . . 5
(AO, 576) In .bst files, remove support for the annote field 5, 107	(AO, 580) Control .bst at run time. 5

(AO, 580) Provide a document class option to turn off production of eprint field in bibliography.	5	4.1r	data if the .bst style is set by REVTeX.	59
(AO, 581) Handle case: merged references, with first ending in a stop character.	5, 56	4.2a	General: (AO, 595) Provide \lovname along with other List of Videos definitions.	5, 48
4.1p			\longbibliography@sw: (MD) Make long bibliography style the default now.	21
\twocolumn@sw: (AO, 583) Provide interface to ltxgrid			\setup@hook: (MD) Add call to to be a good citizen and allow booktabs.sty to work properly	80
\onecolumn@grid@setup and \twocolumn@grid@setup	21		General: (Aptara) Corrected indentation for tableofcontents appearing along with listoffigure/listoftable.	5
General: (AO, 583) Provide interface to ltxgrid			(Aptara) Make prb style to follow other Phys. Rev. journals.	5
\onecolumn@grid@setup and \twocolumn@grid@setup	5		(Aptara, MD) Added initial support for SOR and AAPM journals, additional journals for APS, and additional journals and proceedings for AIP, unreleased.	5
(AO, 584) Per MD, remove trailing space character from each journal abbreviation: it had caused an extraneous space in the .bbl	5, 94		(MD) Add call to normalsize to be a good citizen and allow booktabs.sty to work properly	5
4.1q			(MD) Make long bibliography style the default now.	5
\@bibdataout@aps: (AO, 588) Only write REVTeX-specific BibTeX .bib data if the .bst style is set by REVTeX.	64		(MD, Aptara) Make titles in bibliography default, prb style to follow other Phys. Rev. journals, add a unified physrev option as well as prx, prapplied, prmaterials, prfluids, prab, and prper options. Corrected indentation for tableofcontents appearing along with listoffigure/listoftable.	77
\bibliographystyle: (AO, 586) When .bbl is pasted into the document, prevent automatic bibliography inclusion.	56			
(AO, 588) Only write REVTeX-specific BibTeX .bib data if the .bst style is set by REVTeX.	56			
\present@bibnote: (AO, 586) When .bbl is pasted into the document, prevent automatic bibliography inclusion.	58			
General: (AO, 586) When .bbl is pasted into the document, prevent automatic bibliography inclusion.	5			
(AO, 588) Only write REVTeX-specific BibTeX .bib data if the .bst style is set by REVTeX.	5			
write@bibliographystyle: (AO, 588) Only write REVTeX-specific BibTeX .bib
